CARR PACK

USER GUIDE

DEPLOYMENT

To deploy pack, grasp the deployment handles, and pull straight down until front panel releases. Once released, flip front panel over right shoulder with MOLLE side out.

Connect front panel chest buckle to left shoulder buckle.

If using Cummerbund, reach behind to grab out of the pack, bring around and attach to front panel buckles on each side.

If not using the Cummerbund, bring front panel straps back and buckle into hip belt instead.

MED KIT DEPLOYMENT

If using deployment handle, grab handle and pull to release the pack. Reach around and pull off of Velcro base.

Note: If using without deployment handle, user will have to just reach around and pull kit from the pack.

Repacking

Place med kit in pack as shown, and attach Velcro pivot to small patch at bottom.

If using deployment strap, turn 180° inward and attach to front Velcro panel. Note: Make sure strap is tight (no slack) for maximum stability.

Place cummerbund and all straps inside pack, then place the front panel over the top with the MOLLE side down. All straps should be held inside except deployment straps.
Connect pack zippers on both sides and secure

Secure Velcro seal at base of bag.

Attach deployment straps to Velcro strips for low visibility.

Pack Features

Front Panel Compartments

Front panel has 2 large compartments. Left side compartment has Velcro patch for carry weapon holster mount.

Velcro

Front Panel Mag Pouch

Front panel is a plate carrier, has MOLLE throughout, and has a 3 mag holder that is removable and gives way to another usable pocket.

Cummerbund

Cummerbund straps made from MOLLE that can be removed if not in use.

Plate Installation

Access to plate compartments can be found at the base of the front panel, and the bottom seam of the back panel. Slide armor into plate cradle and secure with strap.

Hip Belt Removal

To remove hip belt, locate Velcro straps at base of pack behind front panel buckle and detach on both sides. Separate Velcro patch inside lower back support, and slide belt out.

Low Vis Set:
Hip belt and med kit deploy handle removed.

Deploy Strap Conversion

Fold Velcro pad to the up position. Secure tabs on either side into fastening loops (male side of pad is now facing out).

Note: For heavier kits, deploy strap can be used with pad in the down position for better stability using top Velcro strip as well.

Velcro Down

Taking strap, insert red handle first (make sure Velcro on strap by handle is facing down) into slot next to left shoulder strap. Secure to shoulder strap with Velcro.

Med Kit

Med kit can house a fill capable of triaging up to 5 casualties. Easy break open, 5 removable compartment system that is completely customizable.

Kit and compartments outfitted with Velcro, making easy to customize. Mountable to front panel for addressing casualties quickly while being hands free.
