Course Details

Awareness Courses

IED Awareness for First Responders **AZ-003-RESP**

Sponsoring State: AZ

Course Level: Awareness

Delivery Type(s): Residential

Duration (in Hours): 4.0

Duration (in Days):

Course Description:

This is a 4-hour Awareness-Level course designed to provide awareness and knowledge on explosives, incendiaries, IED precursor materials, destructive effects, environmental considerations, bomber psyche, IED characteristics, IED incident safety, IED incident security, current IED trends in Iraq and IED statistical data. **SCOPE:** Fundamentals of response to suspect IED incidents; basic procedures for identification of hazards and hazardous materials related to IEDs.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

None specified

Mission Area(s):

- Protect

Discipline(s):

- Emergency Management
- Emergency Medical Services
- Fire Service
- Hazardous Material
- Law Enforcement
- Public Safety Communications
- Public Works

Neighborhood Emergency Training (NET) Course for Response and Community Personnel

CA-001-COMM

Sponsoring State: CA

Course Level: Awareness

Delivery Type(s): Residential

Duration (in Hours):

Duration (in Days):

Course Description:

Provide basic information on how to prepare for and respond to a disaster and /or flu pandemic if one should occur. Assist community members in developing, practicing and maintain personal emergency plans. Course topics will include the following: Basic Preparedness, Flooding, Terrorism Awareness, Family Preparedness, Hazardous Materials, Animal/Pet Preparedness, Earthquakes, Sheltering in Place, Fires, Evacuations, Severe Weather, Avian Influenza. Small group discussions and a table top exercise are part of the training.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

NA

Mission Area(s):

- Common

Discipline(s):

- Emergency Management

Sponsoring State: CA**Delivery Type(s):** Residential**Course Level:** Awareness**Duration (in Hours):** 8.0**Duration (in Days):****Course Description:**

This is an 8-hour Awareness Level course. POST has statutory requirement under SB 1350 and Penal Code Section 13519.12 to develop a standardized course of instruction that meets or exceeds the G&T Dispatcher Tasks in the National Training Strategy and the additional 9 training elements that are required as part of any awareness curriculum by SB 1350 (California Law enacted by the Legislature and signed by the Governor in 2002). This standardized curriculum has been designed by POST and subject matter experts from California to be consistent with the standardized awareness course given to all sworn peace officer personnel and to provide dispatchers with the knowledge and skills needed to deter or to respond to a terrorist attack. This course was developed to meet both state and federal requirements for the training of approximately 6600 dispatchers that participate in the POST program.

Sponsoring State: CA**Course Level:** Awareness**Delivery Type(s):** Online/Distance Learning**Duration (in Hours):** 4.0**Duration (in Days):****Course Description:**

This 4 hour Web-Based course combines all course objectives for the Standardized Emergency Management System (SEMS), Introduction to the Incident Command System (ICS) for Higher Education, Incident Command System for Single Resources and Initial Action Incidents, and Introduction to the National Incident Management System (NIMS) into one standardized course for community college personnel. Overview: The purpose of this course is to provide a basic understanding of the key concepts within the Standardized Emergency Management System (SEMS), the Incident Command System (ICS), and the National Incident Management System (NIMS) in a web-based format. This course has been tailored to discuss many of the unique challenges community college personnel face during incidents where SEMS, ICS, and NIMS will be utilized. The web-based format is intended to enable greater access to this training material by allowing community college faculty, staff, and administrators the flexibility of completing the required courses at their own availability. Scope: The scope of this course is to provide awareness level training on the Standardized Emergency Management System, and cover each of the 22 course objectives of the ICS-100 for Higher Education, ICS-200 for Single Resources and Initial Action Incidents, and the National Incident Management System courses as identified in the National Incident Management System: Five-Year NIMS Training Plan. Module One: Introduction to the Web-Based Training Console and System Test - Student System Test and Setup - Navigation Instruction - Course Introduction Module Two: Standardized Emergency Management System (SEMS) & Introduction to Incident Command System for Community Colleges - It's Academic - Higher Ed Disaster Preparedness Video - Welcome and Interactive Web-Based Training - History of ICS & SEMS, Introduction to SEMS - ICS Overview - Basic Features of ICS - Incident Commander & Command Staff Functions - General Staff Functions - ICS Facilities - Common Responsibilities - Module Two Review Exam Module Three: Incident Command System for Community Colleges - Leadership and Management - Delegation of Authority & Management by Objectives - Functional Areas & Positions - Briefings - Organizational Flexibility - Transfer of Command - Module Three Review Exam Module Four: National Incident Management System for Community Colleges - Understanding NIMS - NIMS Components - Module Four Review Exam

The overall goal is to provide participants with knowledge skills and abilities that will enable them to assess the behavior of passengers in order to report suspicious behavior to the proper authorities. Course Objectives Course Goal: The goal of this course is to provide the participants with the skills knowledge and abilities to apply the Transit Oriented Screening of Passengers by Observational Techniques (TO SPOT) while accomplishing their transit duties. Required Student Learning Activities Terminal Learning Objective: At the conclusion of this course, participants will be able to apply TO SPOT as an integral component of the protection scheme for transit systems. Enabling Learning Objectives: At the conclusion of this course, participants will be able to:

1. Discuss the requirements for transit threat and vulnerability analyses and how they can be used to improve transit security.
2. Describe the components of effective transit system defense.
3. Identify indicators of a potential terrorist attack against a transit target
4. Explain major considerations in isolating incident scenes and conducting evacuations during a transit terrorist incident.
5. Discuss media relations for a transit CBRNE incident.

Students will also participate in a practical exercise which will require them to demonstrate the skills they have learned. Participant Qualifications Participants are welcome from all areas of the transit system. In particular, front line transit employees these front line employees may include bus operators, custodial staff, maintenance personnel and any other transit system employees who interact with the general public on a regular basis.

This course is intended to ensure that the requirements of relevant domestic legislation, and other pertinent guidance are addressed through standards of knowledge and the acquisition of specific understanding through education and training. This course constitutes a base-level curriculum for maritime security education and training that includes those subjects listed in MTSA Regulation 33 CFR Chapter 1, Subchapter H, Secs. 109 (b)(2), 104.225, and 105.215. particularly with respect to those personnel without specific security duties. Additionally, this course specifically covers CBNE/WMD. Course Objectives: Those who successfully complete the course will be able to demonstrate sufficient knowledge to support the implementation of relevant maritime security plans. They will be able to: 1. Identify key aspects of MTSA regulations and the ISPS Code; 2. List the meaning and the consequential requirements of the different security levels; 3. Identify aspects that demonstrate knowledge of emergency procedures and contingency plans; 4. Recognize a weapons, dangerous substances, and devices (including WMD/CBRNE), along with common techniques for their detection; 5. How to recognize, on a non-discriminatory basis, of characteristics and behavioral patterns of persons who are likely to threaten security; 6. Common techniques used to circumvent security measures; 7. Identify key components of California's Maritime Security doctrine; 8. Identify their role in maritime security emergency preparedness drills and exercises.

Course Level: Awareness

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 16.0

Duration (in Days):

Course Description:

This course addresses the fundamentals of Situational Awareness (SA) and Common Operating Picture (COP) for emergency management and includes detailed instruction covering concepts, theory, capabilities, tools, and techniques for achieving a more effective SA and COP system in support of emergency operations. The course supports the Communications and Information Management component of the National Incident Management System (NIMS). Individuals and organizations at all levels of response have a responsibility to both contribute to and use reliable information as a part of incident response efforts. Despite the importance of maintaining SA and COP for all types of incidents, there are few resources available for individuals and teams to improve their capabilities in this arena. This course is designed to build the SA/COP skills, knowledge, and capabilities of individuals, teams, and organizations involved in all-hazards, all-phases of emergency preparedness, response and recovery. Upon course completion participants will be able to: Explain the role of SA and COP in the Integrated Emergency Management System, Explain the five layers of the SA/COP system, Describe capabilities essential SA/COP for the SA/COP system, Understand accepted criteria for assessing the effectiveness of participant EOC's SA and COP systems, Explain the relationship between information and effective critical decision-making.

Course Level: Awareness

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 8.0

Duration (in Days): 1.0

Course Description:

This course introduces students to a framework of best practices-standards, processes, tools and procedures for the EOC/DOC Management Section's staff consistent with SEMS and NIMS requirements. The program of instruction offered in this course describes these tools, techniques and structured processes. In addition to reinforcing the Management Section's role in both coordinating EOC/DOC operational cohesion and steering EOC/DOC unity of effort, this course describes the Management Section's responsibilities, concept of operations, decision-making tools, processes and best practices. The course contains jurisdictionally relevant disaster-related examples, activities and case studies designed to prepare the EOC/DOC Management Section's ability to activate, direct, coordinate and plan in case of an incident.

Course Objectives:

At the end of this course, participants will be able to:

- This course introduces students to a framework of best practices-standards, processes, tools and procedures for the EOC/DOC Management Section's staff consistent with SEMS and NIMS requirements.

This interactive CD-ROM will help prepare healthcare personnel for CBRNE emergencies. This program is designed for everyone: care providers, support personnel and administrators in hospitals, clinics, EMS, public health, MD offices and other medical and health providers. It covers the threats likely to cause a CBRNE emergency, preparedness actions and safety measures that all staff should know in the event of a CBRNE emergency. This program can be stylized as First Responder Awareness (FRA) training as defined by OSHA.

This is a 4-hour operations level course. This one-day standardized course is designed for personnel statewide that are working in an intelligence assignment within their local agency or as part of a TEWG specifically assigned to this function in a regional area. The course has been designed to develop a trained, coordinated and connected cadre of personnel that will serve as the first layer of information management for every law enforcement agency in California, and eventually nationwide. As designed, the TLO will be trained to work with the community, other governmental agencies, the private sector, California Regional Terrorism Threat Assessment Centers, Joint Regional Information Centers in a cooperative and collaborative effort to gather information that will be forwarded to the appropriately designated intelligence organization. Conversely, the TLO will also be the designated recipient of information and intelligence coming from all other intelligence sources.

Developing an all-hazard plan for protecting lives and property may seem like an extremely difficult challenge; it need not be. Emergency operations planning need not start from scratch. Those tasked with writing an emergency operations plan should take advantage of others' experiences. The Disaster Planning course at CSTI guides you through a number of processes to make your planning process easier and more successful. The public expects emergency managers to take immediate action to minimize the impact caused by disasters and emergencies. Those actions are most successful when planned. In this course, participants will learn the tools and techniques for developing or enhancing an all-hazard emergency operations plan. The following key topics are discussed: - The Planning Process, Using SWOT Analysis Tools - Situation Assessment - Hazard Threat and Risk Analysis - Using SEMS as a Guide for Written Plans - Planning for: Business - Volunteer and Service Organizations - Terrorism Planning - Emergency Medical Planning - How Disasters in Other Countries Affect California - Mitigation and Recovery Exercises, - California Emergency Planning Guidance Recovery Issues - Case Studies from Local Government

Module 1 Terminal Learning Objective (TLO): Participants will be able to describe the interoperable communications program. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Describe the background of the interoperable communications program - Describe mandates of interoperable communications projects - Describe the various programs and plans that are part of the interoperable program

Module 2 Terminal Learning Objective (TLO): Participants will be able to describe the ICS organization and COMT role. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Describe the Management and General staffs - State where in the ICS organization the Communications Unit is positioned - Describe the basic roles and duties of the COML - Describe the role of the COMT and Incident Communications Center Manager (ICCM)

Module 3 Terminal Learning Objective (TLO): Participants will be able to describe the communications systems and equipment that facilitate interoperable communications. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Describe the various 'bands' utilized in frequency allocation - Describe the Cal-IFOG - Describe the fixed-equipment infrastructure of a communications system - Coverage Issues - Systems - Local Overview (Jurisdiction specific information added by representative)

Module 4 Terminal Learning Objective (TLO): Participants will be able to state methods for facilitating interoperable communications. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Describe radio swapping. - Describe caching of radios. - Describe frequency patching. - Describe what a gateway is. - Describe frequencies for law enforcement mutual aid.

Module 5: Review & POST Test

The State of California Inmate Radicalization Working Group, a collaborative effort among numerous local, state and federal agencies, developed the nexus product for this course. This course provides an intermediate of level awareness. It is designed to provide corrections and law enforcement personnel with information regarding the ongoing presence of inmate radicalization and recruitment. It will also provide the participants with the knowledge that resources exist to mitigate the impact of radicalized behavior. Target Audience This course is developed for law enforcement and corrections professionals. The entire course, although unclassified, is for official use only and is considered law enforcement sensitive. Module 1: Introduction, Pre-test and Refresher - Information Sensitivity - Course Overview - Objectives - Asymmetric Threat - Pre-test - Basic Course Refresher Module 2: Important Reports and Case Studies - Blurring the Line Between Prison and Society - Reports/Studies Review - Recent Indictments Review Module 3: Correctional Intelligence Initiative - Best Practices - Correctional Intelligence Initiative (CII) Objectives/Overview - Corrections in America - Defining the Problem/Challenge - CII Mission and Goals - CII Program Elements Module 4: American Radical Islamist-Inmate Convert (ARI-IC) - 4th Generation Warfare and the ARI-IC Threat - ARI-IC Characteristics - Identifying ARI-IC Groups/Individuals - ARI-IC Group Profiles Module 5: Investigating the ARI-IC - ARI-ICs vs Gangs - Source Development for ARI-ICs - Interviewing Techniques for ARI-ICs Module 6: Intelligence-Led Policing in the Correctional Environment - Intelligence-Led Policing Concept - Indicators and Warnings - Assessment - Information Sharing and Networking Module 7: Conclusion and Post-test - Course Review - Additional Resources - Post-test

This module introduces participants to fire behavior, provides a historical and geographic study of Wildland Urban Interface Fires, introduces law enforcement's primary duties at such events, identifies fire disciplines resources, and discusses the concept of Fire Jihad. Terminal Learning Objectives (TLO) The participants will be able to identify fire behavior and history, summarize law enforcement's role in an Urban Interface Fire environment, and infer the possibility of terrorist participation in large-scale fires. This module provides an opportunity for participants to review the Incident Command System (ICS), an introduction to the fire services rank structure, a comprehensive review of fire influences and fire response, and identifies allied agency support and mutual aid issues. Terminal Learning Objectives (TLO) The participants will be able to summarize the eight major functions of ICS, define the fire services' rank and structure along with their tactics, and outline the mutual aid process. Scope Statement This module provides an opportunity for participants to discuss the need and process for pre-incident planning, and to associate the roles and responsibilities of the Emergency Operations Center (EOC), Department Operations Center (DOC), and Command Post (CP). Terminal Learning Objectives (TLO) The participants will be able to assess the value of pre-planning in both relationships and threat assessment, and will be able to contrast the roles at the Emergency Operations Center (EOC), Department Operations Center (DOC), and the Command Post (CP). Scope Statement This module provides an opportunity for participants to view a fire safety video, develop evacuation plan(s), identify applicable laws and regulations pertaining to evacuations and road closures, and investigate evacuation stages. Terminal Learning Objectives (TLO) Participants will be able to outline the process of conducting an evacuation, recognize applicable laws and limitations, and summarize the stages of an evacuation. Scope Statement This module provides an opportunity for participants to review in detail the previous fire safety video using examples for each acronym, and discuss fire safety equipment. Terminal Learning Objectives (TLO) Participants will be able to recite the meaning of the safety acronym LCES and will be able to discuss factors which affect officer safety.

Use of ALPRs and accompanying technology is becoming commonplace in many Law Enforcement agencies throughout the State of California. Training to the most effective, responsible, and legal guidelines is an identified training gap for the CCIC Region. There are no known courses that deliver training on this skill outside of what software vendors offer customer agencies. The instructors that will deliver this course are uniquely qualified to present this material and more importantly, able to answer questions by students based upon the practical experience they have gained utilizing License Plate Reader (LPR) technology and databases. The primary instructor has consulted numerous law enforcement agencies on best practices when establishing an LPR program and has instructed numerous classes in its diverse uses. This course is designed to inform the student of all aspects of the diverse use of License Plate Reader (LPR) technology. This class will cover License Plate Reader (LPR) technology available to law enforcement with the best practices for its deployment, legal guidelines, and Civil Rights/Civil Liberties concerns. This course will demonstrate all features of LPR technology utilizing real world scenarios. Students will be shown an alternative to deploying the traditional law enforcement LPR model highlighting the integration of certain Private Sector LPR data. Since LPR technology is in its infancy this course will identify best practices in using the data covering the legal aspects. While this course is designed to cover the use of all LPR systems, the use of Vigilant Solutions Law Enforcement Archival Reporting Network (LEARN) will be the basis for best practices examples. Attendees will see the effect of using a robust analytical tool within LEARN to maximize investigative efforts in almost every facet of the job. The diversity of the LEARN program will be demonstrated in both areas of field enforcement and investigations. Course Content: -How LPR technology works -How to maximize your agencies LPR fleet -Legal aspects of LPR -LPR Investigative resources -Private LPR data and how it is used -LPR hotlists-creation, deployment and training -Alternatives to traditional LPR systems

This 8 hour course on Targeting, Sabotage and Disruption of Public Utilities course provides the student, through case studies, with an overview and history of threats and acts from local to international incidents. The modus operandi of known suspects and suspected groups is discussed leading to the consequences of these actions. Specific infrastructure knowledge is outlined in those areas vulnerable to attack, redundancy capabilities and limitations as well as information regarding communication sites. The potential impacts of active procedures are identified including area checks, traffic stops, and calls for service analysis, theft reports, arrests and citations, vandalism reports and field interviews to deter acts in critical areas. The course concludes with the topics of recovery and mitigation measures through developing Continuity of Operations (COOP) and Multi-Year Strategy and Program Management Plans (MYPMP) that are in compliance with Preparedness Circular 65 (FPC 65).

Course Objectives:

At the end of this course, participants will be able to:

Understand history of threats and acts from local to international incidents.

Other Prerequisites:

Terrorism Liaison Officer (TLO) basic. IS 700, IS 800

: Pandemic Influenza Preparedness and Response is a one-day, eight-hour course that provides first responders, health department information specialists, health care workers, and others with an overview of the threat pandemic influenza poses, its challenges, clinical aspects, its relationship to current avian influenza virus (H5N1), and the planning assumptions addressed in the Implementation Plan for the National Strategy for Pandemic Influenza. Successful completion of the course provides participants with basic understanding of and tools to address the many facets of an effective planning and preparedness program. Course Objectives: At the conclusion of this course, participants will be able to: Explain the difference between seasonal influenza and pandemic influenza. Describe the potential seriousness (morbidity and mortality) of pandemic influenza. Identify why avian influenza is in the news. Outline what the federal government has done to prepare. Describe the National Incident Management System (NIMS), the Incident Command System (ICS), and California's Standardized Emergency Management System (SEMS). Identify what communities can do to prepare for and the steps that may be taken within communities to respond to pandemic influenza. Describe what faith-based communities and businesses can do to prepare. Identify potential difficulties (e.g., social disruption, spot shortages of goods and services, interruptions in basic services, etc.) individuals and families should plan for in the event of pandemic influenza. List the kinds of foods, medical supplies, and other resources individuals and families should have on hand to shelter in place for at least two weeks in preparation for and response to pandemic influenza. Outline what health care facilities can do to prepare to cope with a pandemic. -Describe the type of personal protective equipment first responders and health care workers should use when caring for patients with suspected or confirmed Pandemic Influenza.

This entry level overview will aid in establishing a culture of response to Human Trafficking (HT) as well as application of victims' rights when an HT victim is refusing, or not requesting services and help. Specific HT victim response skills will be covered, with exercises that will illustrate the full spectrum of HT from labor to sex trafficking, as well as domestic and international. Attendees will be encouraged to conduct an "HT audit" in the first hour, by answering a few questions about themselves and their agencies. They will identify possible responses to common problems and situations. Participants will also answer the question, "What does a victim centered approach look like in my field?"

I. INTRODUCTION

A. Intro by Carissa Phelps, CEO of Runaway Girl, FPC a company with purpose

B. Why and how RG is "Creating Empowerment Opportunities" for survivor leaders in local communities.

C. Introduce and establish the RG team and our partners from CAST

D. Overview of topics and format for the training workshop;

E. Stages of community building

F. A-B-C framework

G. Awareness-Belief-Capacity

II. AWARENESS

A. Participants and trainers explore what it means to be "Aware"?

B. Definitions and overview of Modern Day Slavery; HT 101; CSE-C; Labor Trafficking; our levels of awareness

C. A brief legislative history over the last 5 years; and what has changed for local law enforcement since Prop 35's mandate by voters to change our approach to child "prostitution" in California.

III. MEDIA INFLUENCE

A. The influence media plays on youth psychology with respect to trafficking.

B. Presented by Rachel founder of Sowers Education Group

IV. HIDDEN - WHERE?

A. From our trainers; what to watch for; what to be aware of; how to identify

B. Presenters are Alexandra, CAST team, and Juanetta founder of Walking in Splendor

V. BELIEF

A. "Belief" regarding the abuse and/or harm that trafficking causes.

B. INTRO TO MIND CONTROL AND UNDUCE INFLUENCE IN CSEC AND HT - Co-presented by Tashina, Steve and Cody

VI. CAPACITY

A. Capacity building; personal and professional. Co-presenters Carissa, Autumn, and presentations by CAST team

B. Reality, when services and programs are not available.

C. CAST in labor trafficking and moving beyond to CSEC

D. Related fields to draw protocols, best practice and experts from; such as DV, Sexual Assault, peer support networks, veterans groups (successful programs empower veterans as mentors and find community liaisons for vets)

E. Capacity building models;

F. Grassroots efforts such as The GRACE Network; Neet's Sweets; Sowers Education Group

VII. PANEL and Wrap-up

A. Experts explore A-B-C's with participants, via panel.

B. Questions are taken from participants

C. Close with one message from each trainer and survivor.

Course Objectives:

At the end of this course, participants will be able to:

- Participants will be able to state the course purpose and explain the relevance and importance of covering all forms of human trafficking in this course.
- Participants will have an enhanced understanding of the laws and policies related to human trafficking across jurisdictions
- Participants will be able to identify the eight acts in most human trafficking laws, and explain how and when the acts are used in different stages of human trafficking
- Participants will be able to summarize the means used and challenges that arise when the means are not clear to the victim or the public.

- Participants will be able to quickly identify any form of human trafficking. Red flags and indicators, as well as the profit driven nature of the crime will be examined.
- Participants will have an enhanced understanding of the global and local impact of trafficking in persons.
- Participants will be able to explain the key indicators and tactics used by traffickers, as well as the various contexts in which human trafficking may occur.
- Participants will be introduced to local resources, tools for responding and connecting victims to services, as well as successful outcomes in their own community
- Participants will complete the eight hours of training with a command of key indicators of all forms of human trafficking, and at every stage of trafficking. Participants will also have tools to shift beliefs and culture toward a victim-centered approach to human trafficking.
- Participants' desires to learn more and take action will be met in this module with specific ways for participants to take action moving forward

Sponsoring State: CA**Course Level:** Awareness**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):** 1.0**Course Description:**

This 8 hour Behavioral Threat Assessment: Preventing the Active Shooter course is designed to equip law enforcement and security stakeholders with the skills and tools necessary to proactively identify potentially violent individuals, assess the risk these individuals pose of engaging in violence, manage the risk and prevent violent attacks such as mass shootings. This course specifically addresses the fundamentals of behavioral threat assessment, including a discussion of targeted violence. The course also addresses the "threat calculus" of violence risk and the warning behaviors associated with individuals who are on the "pathway to violence" and intend to carry out a violent attack. Participants will also be presented effective threat management strategies, including criminal and civil statutes, which can be used to proactively manage the risk posed by a potentially violent individual and prevent violent attacks. Concluding with the application of behavioral threat assessment operational and investigative techniques in a variety of contexts, including (1) in public venues; (2) in the workplace; and (3) at schools and on campuses. Terrorism-specific material in this course includes the radicalization processes and indicators that may point toward the potential that the individual of attention may be moving down the road of acting on violent extremist ideologies. The scope of the course covers both domestic and international incidents.

Course Objectives:

At the end of this course, participants will be able to:

- Participants will be able to identify and explain the core concepts of behavioral threat assessment and targeted violence.
- By being able to identify the warning behaviors discussed in this module, participants will be able to recognize if an individual poses a threat to carry out a violent attack or active shooter event and proactively intervene to prevent such an attack.
- Participants will have an enhanced understanding of how to assess whether someone who has made a threat intends to carry it out and how "grievance" operates as the impetus for violent attacks.
- Following this module, participants will understand the different types of warning behaviors typically exhibited by K-12 school active shooters and campus shooters and how to intervene to prevent violent attacks in K-12 schools and in Institutes of Higher Education.
- Following this module, participants will understand the different types of warning behaviors typically exhibited by active shooters who choose to perpetrate their attacks in public venues such as shopping malls, movie theaters, and other public gathering places and how to intervene to prevent these violent attacks.
- Following this module, participants will understand the high risk and significant factors for workplace violence risk and the different types of warning behaviors typically exhibited by active shooters who choose to perpetrate their attacks in the workplace environment.

Other Prerequisites:

Terrorism Liaison Officer (TLO) Basic, IS 700, IS 800

Mission Area(s):

- Prevent

Discipline(s):

- Law Enforcement

Course POC:

Britt, Timothy

POC Work Phone: 916-845-8750

POC Work Email: timothy.britt@caloes.ca.gov

Course Active?: Yes

Sponsoring State: CA

Course Level: Awareness

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 16.0

Duration (in Days): 1.0

Course Description:

This 16 hour course identifies TLO/FLO key roles and prepares the participants to effectively share information with the goal of preventing terrorism and multi-jurisdictional crime. The CVE FCOL course provides training on the capabilities, intentions, modus operandi and tactics, techniques, and procedures of domestic and international terrorist groups. Additionally the training emphasizes on Pre-Incident Indicators, collection and reporting, information sharing, networking and public/private community partnerships. The course consist of 7 modules covering subjects in the area of Domestic Terrorist Groups and Movements, Homegrown Violent Jihadist Threats and Jail Radicalization, Al Qaeda Doctrine, Human Skills, Pre-Incident Indicators and a final exam.

Course Objectives:

At the end of this course, participants will be able to:

- Participants will be able to state the course purpose and explain the importance of understanding, developing/enhancing counterterrorism intelligence and operational strategies.
- Participants will be able to identify pre-incident indicators of a potential terrorist attack or threat.
- Participants will be able to discern key domestic terrorist groups from one another based on each group's history, goals and objectives, leaders, attacks and modus operandi.
- Participants will be able to discern key domestic terrorist groups from one another based on each group's history, goals and objectives, leaders, attacks and modus operandi.
- Participants will have an enhanced understanding of Al-Qaeda capabilities, intentions, tactics, techniques, and procedures to conduct terror attacks on U.S. targets
- Participants will have an enhanced understanding of proven techniques and advanced approaches for collecting relevant, accurate, and validated information using interpersonal interaction with human sources in support of investigations and intelligence operations.
- Participants will be able to perform duties of an intermediate TLO/FLO.

Other Prerequisites:

Terrorism Liaison Officer 8 &24 hour course.

Course Level: Awareness

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 8.0

Duration (in Days): 1.0

Course Description:

This course is part of the TLO Professional Development Series: Overview Participants learn about suicide terrorism from several perspectives including adversary modus operandi; threat awareness; anti-terrorism doctrines; incident response, and pro-active methods to prevent an attack. The participants will be able to take the concepts and tools taught during the course back to their different units and examine how they can be used for preparing to meet the threat of suicide terrorism Scope The ‘Recognizing and Mitigating Suicide Bomber Threats,’ course includes a series of four modules, each touching on a different aspect of the phenomenon of suicide terrorism. Lectures will provide participants with insights into the characteristics of modern suicide terrorism examining key motivating factors and the development of adversary capabilities and trends with a relevant emphasis on both global and local suicide terror. The course will further seek to elucidate upon proper response procedures by law enforcement to suicide terror threats. Lectures will offer best practices based on actual field experience to enable effective incident response and a strong focus on case studies of terror attacks to demonstrate required lessons to be learnt. The course will also include a module on behavioral pattern recognition as a significant proactive tool for possible early identification of a suspect suicide bomber.

Course Objectives:

At the end of this course, participants will be able to:

Participants will be able to explain the characteristics of a modern terrorist attack and be able to convey a full understanding of the nature of local and global threat. Participants will understand the nature, main characteristics, trends and strategic goals of suicide terrorism as well as the principles used for combating the threat. Participants will be able to describe and explain the four basic phases/objectives of first responders after a mass casualty and be able to explain complications and complexities that can arise from a suicide terror attack. Participants will have a full understanding of behavioral pattern recognition and will be better able to identify persons who exhibit behavior suggesting intent to deceive.

Sponsoring State: CA**Course Level:** Awareness**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):** 1.0**Course Description:**

This eight hour course will examine the science, tools and techniques necessary to approach and ultimately elicit rapport, trust, and cooperation from any individual. Case studies and practical experiential exercises will be presented with specific emphasis on the social psychology of influence. In addition, recognizable behavioral indicators of trust will be identified, discussed, and ultimately evaluated based upon the live exercises. This course will further examine the pan-psychological techniques of influence and relationship building with a focus on establishing rapid rapport and trust. The course will develop practical tools through live practical exercises and team interactions. TLO Specific course content allows students to master techniques and methodologies necessary for effective community outreach and networking and developing a substantive and lasting information sharing environment (ISE). For law enforcement this course is putting rigor and process to the core concepts and goals of Community Oriented Policing and alignment with the White House' Countering Violent Extremism initiative. Concepts taught in this course are critical towards assisting public safety personnel identify early homegrown violent extremists in our community, to include foreign inspired (i.e. ISIL and Al Qaeda), anti-government, single issue or hate based. Module 1: Introduction to Personality Assessment, Module 2: Communication Style Inventory (CSI), Module 3: Ten Techniques for Rapid Rapport, Module 4: Five Step Engagement Planning and Module 5: Engagement Planning Practical Exercises

Course Objectives:

At the end of this course, participants will be able to:

- Participants will be able to explain what components make up each humans personal context of the world.
- Attendees will be able to identify their own preferred communication style. Additionally, attendees will be able to recognize how they respond under stress and recognize the style of others. Most notably, attendees will be able to adjust their own style to that of others as appropriate.
- By understanding the basis for developing trust and rapport, participants will be able to develop strategies for effectively engaging individuals they chose.
- By understanding the basis for developing rapid trust, rapport, and engagement planning, the participant will be able to construct an engagement action plan for approaching individuals and building strong bonds and influence.
- By understanding the basis for developing rapid trust, rapport, influence planning, and ultimately developing an engagement plan, the participant will be able to approach individuals and build strong bonds and develop leadership.

Sponsoring State: CA**Course Level:** Awareness**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):** 1.0**Course Description:**

This eight hour course is designed to raise the awareness of students to the Social Media Radicalization (SMR) phenomenon as it pertains to Radicalization and Conversion in the contemporary world. This course will familiarize the TLO with the methods used on social media to radicalize and inspire various malefactors to act so that if information/intelligence within this realm appears on a TLO's radar, then potential investigative action might be enhanced. Online Radicalization now occurs with regard to a wide range of extremist causes within the USA, many of which are not religious based. It should be noted that other Toxic Radical ideologies involving White Hate, Racism, Right Wing, Sovereign Citizens, and Eco-Terror all employ and greatly benefit from aggressive SMR. For the purposes of this course, however, contemporary events will scrutinize the toxic message and efforts of Radical Islam - specifically ISIS and Al Qaeda - and how that message can be so effectively and efficiently delivered to, in particular, impressionable youth worldwide. This course will also examine the rapidly increasing threat of Lone Offender violent extremism within the USA and how SMR facilitates that dynamic to flourish. Areas contained in the outlined are forms of electronic communication, (as Web sites for social networking and micro blogging) through which users create online communities to share information, ideas, personal messages, and other content, Five Hypotheses/Theories Relating to Social Media Radicalization, "Self Radicalization", International case studies, Dark Web - thousands of websites that use anonymity tools like Tor and I2P to hide their IP address, Defining the Radicalization Process, Toxic Islamic Radicalization Sites and Entities ISIS and the AL QAEDA FRANCHISES and Precursors/Red Flags/Indicators of SMR.

Course Objectives:

At the end of this course, participants will be able to:

Identify the methods used on social media to radicalize and inspire various malefactors

This six hour course is designed for school faculty, to include superintendents, principals, school and district administrators, teachers and staff with responsibilities for emergency preparedness and response to address the threat of an active shooter, terrorism and other violent critical incidents on school (K-12) and college campuses. It is a fact that the actions of school faculty during a critical incident will save more lives than emergency first responders. Statistically once a shooting starts a life is taken every 15 seconds. It is imperative that school faculty act quickly when implementing a response to school violence. During this course attendees will receive informative presentations on the history and dynamics of school shootings, awareness-preparation and response tactics for educators, behaviors of concern and reporting strategies, defensive classroom mindset and the law enforcement response.

Course Objectives:

At the end of this course, participants will be able to:

---Design, organization and function of a Joint Information Center (JIC) - Participants develop confidence in their ability to serve within a multi-agency joint information center by actively performing the various functions, such as gathering, analyzing, organizing, writing and disseminating emergency public information during simulated crisis scenarios based upon local issues; ---Public Information Officer (PIO) team training - The Lead Information Officer sees the big picture and oversees the workings of the JIC. The Field Information Officers represent the JIC to the public. The Information Officers working within the JIC may be responsible for writing news releases, producing audio & video tapes and doing interviews with the media. Participants come to appreciate that a JIC is successful when the people in these roles understand the separate but complementary roles required. ---ICS/SEMS/NIMS design - This workshop was created specifically with these emergency response standards in mind. ---The Real World - Adults learn by doing. This workshop gets participants out of their seats and simulating the real world situations they're most likely to face in a crisis. At the end of this 2-day workshop, the classroom looks like a real JIC, with informational charts surrounding the room, news releases on desks and a mock website projected on the wall.

Duration (in Days): 3.0

Course Description:

Force Encounters Analysis: Understanding Human Performance during Critical Incidents is a 24 hour course that has been developed for Field Force Incident Teams, Terrorist Incident Response Trainers, DHS, Sworn Officers &SWAT, Force Investigators, Managers and Supervisors, Use-of-Force Trainers, Critical Incident teams, Police Psychologists, Internal Affairs, City Attorneys, POA Reps, Civilian Review Board Members, and Oversight Committees. An active shooter incident is a personal attack often generated by one male. A terrorist attack may involve one or more individuals dedicated to a common belief to intimidate or coerce the government, the civilian population, or any segment thereof, in furtherance of political or social objectives. Irrespective of the definition, law enforcement officers are called upon to respond often without knowledge of the individual's intent. Force Encounters Analysis may be the most important LE educational course available today. It is a dynamic, participant-centered training based on the latest, unbiased scientific evidence pertaining to officer-involved use of force. The findings delivered in this class have been directly credited with saving officer lives on the street, and preventing some officers from being unfairly convicted of criminal use of deadly force. The use of force, its application, and its very definition are controversial issues that have evaded researchers and police departments for the better half of two centuries. While we may never be able to fully capture the total number of police use of force incidents, we are now able to analyze a multitude of related factors using sound scientific principles. With the affirmation of *Graham v. Conner* (1989) by the Supreme Court, we currently have a legal standard dictating that "police force at any level can be justified so long as the officer is acting like other reasonable officers given the same set of circumstances." The question still remains: What is reasonable? This course will train you to apply multiple human factor principles in any high stress or use of force situation. The course work will identify physical and psychological phenomena associated with human behavior and demonstrate how it can impact performance under stress. Course work covers the science of human dynamics in the midst of a high-stress encounter and will help build a bridge between the latest academic research and the law enforcement environment. Force Encounters Analysis will expand knowledge of clear-cut, scientific evidence to include biomechanical and cognitive elements and will strengthen his or her analytical skills.

Course Objectives:

At the end of this course, participants will be able to:

Force Encounters Analysis will expand knowledge of clear-cut, scientific evidence to include biomechanical and cognitive elements and will strengthen his or her analytical skills.

Course Description:

The CTVAC Law Enforcement Officers' Course aims to provide frontline officers with tactics for countering targeted violence while improving officer safety and enhancing community resiliency. Developed in partnership with the International Association of Chiefs of Police and utilizing media-rich case studies as well as first-hand interviews with former violent extremists, community leaders, and law enforcement from across the country who share challenges, successes and lessons learned, the interactive, four-hour course provides officers with an overview of the threat of targeted violence, an awareness of indicators that may be apparent in day to day operations, and proven tactics to counter the threat while ensuring officer safety. The course identifies common tactics that can be employed regardless of the type or method of targeted violence; cases presented vary include white supremacists, sovereign citizens, foreign fighters, active shooters and more. Participants complete the course with tactics that will not only improve the officer's ability to address the threat of targeted violence, but will enhance the officer's safety in day to day operations, regardless of the threat.

Course Objectives:

At the end of this course, participants will be able to:

- Participants complete the course with tactics that will not only improve the officer's ability to address the threat of targeted violence, but will enhance the officer's safety in day to day operations, regardless of the threat.

The goal of this 8-hour course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This class is intended for all members of Statewide WMD Response Teams (The intended audience is Statewide Mutual Aid Special Operations Teams, Law Enforcement, Fire, Emergency Medical Service, Emergency Management, and Public Works). Students are trained per the Office of Domestic Preparedness Emergency Responder Guidelines for the Awareness Level. Specifically the responder will recognize hazardous material incidents and know the protocols used to detect the potential presence of WMD agents or materials. The student shall know and follow self protection measures for WMD events and hazardous materials events. The student shall know and follow agency/organization scene security and control procedures for WMD and hazardous materials events. The students shall possess and know how to properly use equipment to contact dispatcher or higher authorities to report information collected at the scene and to request additional assistance or emergency response personnel.

Course Description:

The CTVAC Community Leaders' Course aims to provide community leaders with strategies and mechanisms for countering targeted violence while enhancing the safety and resiliency of houses of worship and other communal spaces. Utilizing media-rich case studies as well as first-hand interviews with former violent extremists, community leaders, and law enforcement from across the country who share challenges, successes and lessons learned, the interactive, four-hour course provides community leaders with an overview of the threat of targeted violence and an awareness of indicators that an individual may be on the path to violence or that a communal institution may be at risk of attack. The course identifies common strategies and practices that can be employed regardless of the type or method of targeted violence; cases presented vary include white supremacists, sovereign citizens, foreign fighters, active shooters and more. Participants complete the course with practical solutions that will enhance the security of communal facilities and their members and thereby allow for safer and more secure communities.

Course Objectives:

At the end of this course, participants will be able to:

- Participants complete the course with practical solutions that will enhance the security of communal facilities and their members and thereby allow for safer and more secure communities.

The goal of this 8-hour course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response that has resulted in the need for a technical rescue. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This is class 1 of 9 in the progression towards membership on a statewide Type II Collapse Search and Rescue Team. Students are trained for technical rescue in spaces consistent with NFPA 1670, 2004 Edition, 5.2, 6.2, 7.2, 8.2, 9.2, 10.2, and 11.2. This course builds additional capabilities above and beyond those that currently exist meeting the need identified by the Illinois Terrorism Task Force (ITTF) Training Objectives 2 and 4, 'Training All First Responders' and 'Training Technician Teams to Deal with B-NICE (Biological, Nuclear, Incendiary, Chemical, and Explosive) Threats' respectively. During this program the student shall accomplish the following terminal objectives: Identify the need for special training prior to response to Structural Collapse, Rope, Confined Space, Vehicle and Machinery, Water, Wilderness, and Trench Rescue emergencies; Assess the local community for the potential for the aforementioned technical rescue responses. This is a program designed to address knowledge acquisition. In the classroom the students are challenged to meet a variety of academic goals by learning factual information, new ideas and concepts as related to technical rescue. Written testing is conducted at the completion of the course. This course meets the awareness level of NFPA 1670, 2004 Edition, Chapters 5-11, NFPA 1006, Chapter 3.3 Definitions, and the Illinois Office of the State Fire Marshall Requirements for Technical Rescue Awareness.

The Kentucky Injury Prevention and Research Center (KIPRC), part of the University of Kentucky College of Public Health, has collaborated with the Kentucky Department of Agriculture (KDA) and the UK College of Agriculture to create a computer-based course on agroterrorism awareness. The course illustrates the potential for terrorist attacks on crops, livestock, and the U.S. food supply. The agroterrorism course is available on CD-ROM to provide extra bandwidth for interactive features. Students will learn from videos, animation, and interactive exercises. Quizzes and course examinations test students' comprehension of the topics. Certification allows graduates to demonstrate their proficiency. The Agroterrorism Awareness course includes five modules: Introduction to Agroterrorism; Natural and Intentional Events; Crops; Livestock; and Prevention and Preparedness. They will be available, free of charge, on one CD-ROM. To inquire about the courses or order a free CD-ROM visit the TRAP web site at www.kiprc.uky.edu/trap/agro

This 8-hour course provides an annual refresher in WMD/HazMat content and practical skills for students who have previously completed the initial training. It introduces students to historical disasters in an effort to give students a perspective on how disaster response has evolved. It reviews: the assessment of CBRNE hazards; the use of PPE; the need for decontamination; and the importance of adhering to required policies and procedures for responder safety. The Hazards Module highlights current threats, which will evolve to reflect emerging local conditions. The FBI 12-step WMD crime scene management technique is covered. During 4 hours of practical exercise, students perform actions resembling those they would fulfill at an actual incident, such as evidence collection.

This training consists of five hours of instruction to support implementing the National Infrastructure Protection Plan through strengthened information sharing and collaboration between public sector agencies and private-sector organizations. Students will receive an overview of the goals of the NIPP and its common relationship between varied stakeholders. Understanding the pitfalls of information silos and how to bridge communication gaps will be presented to attendees with an emphasis on the development of and maintaining cross sector/agency/organization relationships. Additionally, this training will introduce and develop an All Play mindset that fosters public/private sector collaboration for the purpose of facilitating alignment with National Preparedness Guidelines. Participants will be taught to develop strategies and exercises that produce cross-sector collaboration by sharing best practices, promoting communication, and building integrated Critical Infrastructure Protection Programs that include Federal Universal Task List (UTL) concepts and tools for strengthening information sharing capabilities. At the end of this course, participants will be better equipped to work within public-private relationships and strengthen New Jersey's intelligence-led approach to public safety.

This four-hour awareness course provides the State of New Jersey first responders with the basic skills on radio and interoperability communication. This course of instruction will provide an overview of radio operation and procedures along with basic skills of interoperability communication. The instruction in this course focuses on four critical areas of interoperability communication: radio system design, radio procedures, what is interoperability and what capabilities exist in the State of New Jersey. This course of train-the-trainer will provide an interactive question and answer style training with the information provided by a PowerPoint presentation. The level of knowledge is for those advanced presenters that have more than a basic knowledge. This training style will allow different instructors an understanding of the material, which in turn allow these instructors to present to a different level of participants. The course will provide oversight into some critical procedures and operational situations that affect the safety of every first responder and every person that may communicate within the first responder community. The State of New Jersey interoperability communication plan is complex and a basic understanding of how to operate a radio and provide interoperability communication in an effective manner will be provided. This training will also include a review of key documents from the federal, state and local level that affect communication and will provide what assets are available during a critical incident. At the end of this course, participants will better understand radio operation, how to communicate effectively and what resources are available within the State of New Jersey. This will allow the core group of instructors to provide the basic oversight of interoperability communication.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

This course is recommended for communication services personnel that have some experience in communication. The trainers should have a basic understanding of interoperability communication.

GAMSAP is an awareness program that focuses on understanding the commercial Maritime Industry and Maritime Security and the organizations and regulations involved. It presents and analyzes the key elements of marine transportation and Maritime Domain Awareness. This includes the global supply chain, vessel and intermodal operations, as well as port and terminal operations. The inherent threats and vulnerabilities in the maritime segment are examined as well. They include the various natural and man-made hazards that the maritime world faces, along with criminal activity and terrorist attack. Participants are challenged during break out sessions and exercise scenarios and will gain first-hand experience with the components of NIMS and utilize them as response mechanisms in their solutions to the problems encountered during maritime incidents.

The level of knowledge and expertise varies among all levels of the participants and this style of training will allow the instructor to provide a basic understanding of the material. The course will provide oversight into some critical procedures and operational situations that affect the safety of every first responder and every person that may communicate within the first responder community. The State of New Jersey interoperability communication plan is complex and a basic understanding of ¿How to¿ operate a radio and provide interoperability communication in an effective manner will be provided. This training will also include a review of key documents from the federal, state and local level that affect communication and will provide what assets are available during a critical incident. At the end of this course, participants will better understand radio operation, how to communicate effectively and what resources are available within the State of New Jersey.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

This course is recommended for all first responders and allied agencies that use a radio for communication.

This three-day awareness course provides public safety intelligence analysts within the State of New Jersey with instruction on how to develop their skills so they can be effective leaders within the public safety community. The instruction in this course focuses on three thematic areas critical to the progression of analysts in their career development. These thematic areas include leadership in intelligence, public safety planning, and impacting the operating environment. The leadership instruction on the first day of this course focuses on how analysts can develop the leadership competencies to be effective leaders in their organizations. Participants are introduced to the concept that they must understand their own behavioral styles as well as the behavioral styles of others to maximize their effectiveness as leaders. This understanding is enhanced when leadership powers and styles are understood in the context of the leader-follower relationship. The public safety planning instruction on the second day of training focuses on examining the basic concepts of planning and introduces a planning methodology for law enforcement and homeland security organizations. The three levels of planning (strategic, operational and tactical) are introduced and discussed using practical examples relative to tactical and operational planning. The basic concepts of strategic planning are introduced to afford participants the opportunity to assess organizational capabilities and conduct long term planning. The third day of this course focuses on how analysts can impact their operating environments. This part of the course develops the participants' abilities to understand the dynamics of stakeholders and to build relationships with and among key agency stakeholders to facilitate longer term strategic development. Since a large part of impacting the operating environments of analysts may involve managing change, the concept that organizational change is a manageable and predictable process is introduced to the participants. Finally, the use of persuasion as a means of influencing decision makers and policy formulation is introduced to the participants. At the end of this course, participants will be better equipped to assume leadership positions within New Jersey's intelligence-led approach to public safety.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

This course is recommended for all public safety intelligence analysts with a minimum of five years intelligence analytical experience.

Mission Area(s):

This two-day awareness course has been designed to complement the skills learned by analysts during previous training programs such as the Intermediate Fusion Center Analyst Training Program (IFCAT). This two-day course utilizes an integrated scenario simulating true intelligence operations through which analysts can practice skills learned during previous coursework. Additionally, this scenario requires analysts to work as an integrated team to develop intelligence analysis, intelligence products, and briefings for law enforcement and homeland security leaders. Course participants work in groups consisting of four analysts required to coordinate their analysis at different points. Each of these groups will have a group leader whom will provide the direction for the group's analysis and briefing preparation. Groups will practice writing and briefing skills throughout the two-day exercise, as all members of the group will be required to present their intelligence analysis at different times during the two-day exercise.

Course Objectives:

This executive level training program looks to complement the existing knowledge, skills, and abilities of today's law enforcement and homeland security executives by examining both the craft of analytic report production and methods for operationalizing the report content into executable inputs for devising improved policing approaches. The program begins with an overview of analytic product types, their key structural components and their intended purposes. After analyzing differing analytic products through discussion and class exercises, program participants will delve into methods for using analytic product content to improve law enforcement at a local level. This discussion will help executives utilize incoming information to generate their own local information dissemination.

Duration (in Hours):

Duration (in Days):

Course Description:

The use of Improvised Explosive Devices (IED) during the wars in Iraq and Afghanistan has heightened the concern Emergency Responders and Security Professionals have about the use of IEDs as a legitimate threat. Suicide/Homicide Bombers are prevalent in the Middle East, Europe, and Asia, and have attempted to detonate themselves on flights into the U.S. Package Bombs have been detonated world-wide and letters containing biological weapons were mailed throughout the U.S. after the September 11, 2001 attacks. According to the ATF Bomb Data Center, there have been more than 2,300 bomb threats and suspicious packages in the U.S. since 2004. Experts agree it is not a matter of if, but a matter of when terrorists will deploy IEDs in the United States. This course was designed to be delivered in four configurations, and can be delivered in a one, two, or three day course based upon the needs of the course participant. Section one can be a standalone course delivered in one day. Section one is a prerequisite to section two and/or section three. The first section provide Emergency Responders and Private Sector Security Professionals with a basic knowledge of Explosives, Improvised Explosive Devices and Booby Traps; how to recognize them and what to do when they encounter them. In addition, responders and Security Professionals are taught how to recognize suspicious packages, package handling and mail handling procedures and what to do when they encounter a suspicious package. Lastly, they are taught about Bomb Threats, from receipt to clearing the bomb threat. The second section of the course focuses on Vehicle Borne Improvised Explosive Devices and relies upon the basic concepts taught during the first section of the course. This section provides case studies of VBIEDs including the attack on the Alfred P. Murrah Building in Oklahoma City; VBIED construction and indicators; vehicle search techniques and procedures; and includes a practical exercise. The third section of the course focuses on using X-Ray technology to recognize suspicious items and improvised explosive devices; this section is also reliant upon the concepts taught during the first section of the course. This section provides an overview of X-Ray technology; images produced by X-Ray, recognition of typical construction of items that will commonly be X-Rayed, such as laptop computers, cell phones, cameras, GPS and music players; images that suggest indicators of an IED; and includes several practical exercises using the participant's X-Ray technology, when the course is held on site, or using slides when held in a facility that does not have access to an X-Ray technology.

This three-day awareness course has been designed to complement the skills learned by analysts and investigators during previous training programs (such as the Intermediate Fusion Center Analyst Training Program). This three-day course is delivered via collaborative web portal (webinar training platform) on two days and on the third and final day the training is delivered in a classroom environment. During this course, law enforcement and homeland security analysts and investigators will learn to collaboratively (synchronously and asynchronously) analyze a threat. The threat to be examined for this program is the threat of homegrown violent extremists and lone wolf violent actors. Overview In this course, participants will learn about working as a team on a public safety threat. Course participants will collaboratively utilize the web portal to discuss and share various open source information on homegrown violent extremists and lone wolf violent actors. The course will yield an analytical compilation and actionable recommendations for law enforcement executives working to mitigate the threat of extremism and lone wolf violence in their jurisdictions. Scope This three-day awareness course is designed to develop the analytic competencies of intelligence analysts and investigators working synchronously and asynchronously on a web portal. The participants of this course will utilize a web portal as well as collaborative analytic tools as a means to study a public safety threat to improve public safety planning and impact operating environments to better facilitate New Jersey's intelligence-led approach to public safety.

Participants will gain the skills they need to conduct a vulnerability assessment of a port in order to identify, detect, disrupt and prevent a potential terrorist attack. The Department of Homeland Security Community Assessment Model will be utilized as a guide to identify vulnerabilities of a specified port. The vulnerability assessment emphasizes the importance of port security and the access control procedures, closed circuit television cameras, lighting, bomb blast mitigation, surveillance detection, and the Physical Security Process. Terrorist activity may involve ballistic or stand off weapons, or an improvised explosive device against the Port's facility, individuals, or a vessel docked at the port. This instruction will elevate the participant's knowledge on port security within their geographical area of employment for the purpose of identifying, or disrupting an attack of a port. The course of instruction will also prepare the participants to conduct a mock assessment and present their findings and recommendations.

Course Objectives:

At the end of this course, participants will be able to:

This course of instruction is designed to provide patrol level officers a basic understanding of vehicle screening checkpoints and their function in those checkpoints. Patrol officers, including line supervisors, of any background are an ideal participant in this training. Particularly, officers who are employed in an urban environment will benefit most from this course of instruction.

Additionally, executive staff and ranking officials would benefit from this course. It will give them a better understanding of the impending threat and allow them to form policies and procedures to better suit the needs of the responding officer.

This course provides participants with an awareness level knowledge base of vehicle screening checkpoints. The vehicle Screening course (VSC) will prepare uniformed members of the service to operate a vehicle checkpoint in order to detect and deter a vehicle-borne attack. The vehicle screening course will expose participants to the many facets of vehicle borne-attacks. The course reviews case studies and a cursory overview of explosives and their effects. Additionally, vehicle screening procedures and screening techniques are discussed and small group hands on activities will allow the skills and knowledge learned to be practiced in a controlled environment.

Course Objectives:

At the end of this course, participants will be able to:

Terminal learning Objectives

Module 1 At the completion of this module, participants will identify all requirements for the successful completion of the Vehicle Screening Course.

Module 2 At the completion of this module, participants will understand the definition of a VBIED, why a terrorist would choose this method of attack and pertinent case studies from the past.

Module 3 At the completion of this module, participants will be able to analyze a situation with a possible I.E.D. involved and respond accordingly. Participants will recognize portions of improvised explosive devices and recognize their importance to the explosive device.

Module 4 At the completion of this module, participants will understand the different types of checkpoints, how to establish them in a hasty manner, and what roles must be filled.

Module 5 At the completion of this module, participants will be able to summarize the proper screening procedures and recall different interview techniques.

Module 6 At the completion of this module, participants will understand why technology should be utilized at checkpoints and how countermeasures may assist with detection.

This course will provide participants with competency in the following areas:

§ Home-made explosive component identification

§ Vehicle Screening Checkpoint types

§ Vehicle Screening Checkpoint assignments and duties

§ Vehicle Screening Technique utilizing available technology

§ Rapid interview techniques

§ Effective communication methods for checkpoints

§ Checkpoint emergency procedures

Other Prerequisites:

There are no prerequisite courses required. All participants should be uniformed members of the service. All information disseminated in this course is for Official use only. Personnel outside the NYPD must have prior approval from the Police Commissioner's Office before attending.

Primary Core Capability:

Screening, Search, and Detection

Secondary Core Capability(s):

- On-scene Security, Protection, and Law Enforcement
- Screening, Search, and Detection

Mission Area(s):

- Prevent
- Protect

Discipline(s):

- Law Enforcement
- Security and Safety

Course POC:

Course Active?: Yes

Sponsoring State: NY**Course Level:** Awareness**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):** 1.0**Course Description:**

This course will define the proper techniques and tactics for post-incident scenarios in an urban setting. Establishment and security of the casualty collection point, the use of a bunkering technique, proper firearm control and communication between responding teams are among the skills that will be demonstrated and described during the course. This course will also give students the ability to properly provide care for themselves, their partner, and civilians in an active shooter scenario. The three different levels of care as defined by the Tactical Emergency Casualty Care (TECC) protocols will be defined. Students will learn how to properly use the Simple Triage and Rapid Treatment system and prioritize victims in a tactical combat environment. By the conclusion of the course, students will be able to identify the proper situation for tourniquet application, hemostatic agent application, trauma bandage usage and other life-saving techniques. A cursory understanding of blast injuries, burns, lacerations and fractures will allow the student to effectively care for a casualty during, and after an active shooter incident. The participants will be introduced to proper extraction techniques for injured victims, which then can be applied to proper Contained Threat Rescue techniques. Students will be put into life-like scenarios in which their knowledge and understanding of the skills taught will be tested. They will be required to deal with a simulated mass-casualty incident, with and without possible threats still in the scenario. Students will demonstrate the use of a casualty collection point and immediate action plans. They will be able to demonstrate the application of life-saving techniques under simulated stressful events and also utilize proper triage and contained threat rescue methods.

Course Objectives:

At the end of this course, participants will be able to:

- Define the proper techniques and tactics for post-incident scenarios in an urban setting.
- Demonstrate ability to properly provide care for themselves, their partner, and civilians in an active shooter scenario.

Other Prerequisites:

Prospective students must be uniformed members of service currently working in a law enforcement capacity to attend this course. It is required that any prospective student attend the ALERRT 2-day training cycle prior to attending this class. Prior training in CPR and first aid is advantageous but not necessarily required. Personnel outside the NYPD must have prior approval from the Police Commissioner's Office before attending.

Mission Area(s):

- Respond

Discipline(s):

- Law Enforcement

Duration (in Days):

Course Description:

This course gives state, tribal, and local governments in California the tools and resources needed to build and maintain self-sustaining exercise programs. This course builds knowledge throughout the 4 days, following the CA HSEEP chronological progression. It begins with exercise management, transitions into foundation, then address exercise design and development, conduct, evaluation, and improvement planning in sequence. The course is built in modular components and is designed to be delivered as a complete unit, separately, or in combination with other modules. This flexibility gives the opportunity to use the course to meet many different needs and audiences. The course is divided into 9 modules: Introduction, Exercise program management, Foundation, General exercise design and development, improvement planning, discussion based exercise, developing a table top exercise, conducting a table top exercise, and operations based exercise.

Duration (in Hours): 36.0

Duration (in Days):

Course Description:

This 36- to 38-hour response unit leader development program is designed to enable first-line leaders to better build, prepare, and maintain high-functioning teams that will be error resilient, adaptive, and cohesive when conducting emergency operations. The program presents core cultural attitudes and behaviors needed for fostering effective high-risk operations, and focuses on building an effective response unit culture through leadership. Realistic application opportunities are provided to enable students to exercise new skills and techniques. This program is principles-based, and is patterned after established U.S. military programs. At the Point of the Spear: Leading and preparing emergency response units is the title for a set of leadership development programs that share the same content and objectives, but have been adapted to specific audiences by modifying the context through which the content is presented. These versions run under different titles and contexts, making the program more effective with specific responder types. Fire Service Leadership, designed for municipal firefighting, is an example of one of these contextual versions.

This one day standardized course for all peace officer personnel statewide is customized to blend in all of the federal ODP requirements with existing California government Code sections mandating the use of SEMS/ICS. The course is designed to augment the skills and the deployment of peace officers with a standardized incident management system that will be utilized on all critical incidents involving terrorism or WMD in California. The course curriculum meets all of the current NIMS requirements (March2004) as well as the specific curriculum required by California Government Code Section 8607 which requires agencies to use SEMS/ICS as an integrated tool for responding to critical incidents. The proposed course will meet both federal and state requirements in one course that can be delivered at local agencies or in one of 23 regional training facilities.

This is a 24-hour operational level course for peace officers that will be trained to deliver the 8-hour NIMS/SEMS/ICS training statewide. This three-day train-the-trainer course has been designed to provide experienced instructors with all of the materials needed to effectively deliver the 8-hour standardized curriculum. The course is developed to meet the unique need of blending federal NIMS requirements with California SEMS/ICS requirements that are mandated in Government Code 8607. Instructors that successfully complete the course will be certified to deliver the 8-hour NIMS/SEMS/ICS course. This instructor course was designed to meet specific training that is statutorily required in California law. This course and its 8-hour standardized course were designed under the auspices of Senate Bill 1350 and Penal Code 13519.12, which directs the Commission to develop terrorism related courses.

Course Level: Management

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 40.0

Duration (in Days):

Course Description:

This 40-hour program is critical for leaders transitioning from leading at the leader-of-people level to the leader-of-leaders level. Incident Leadership is also beneficial for unit leaders who work at the leader-of-leaders level during an incident. In addition, operations and unit leader personnel working on Type 2 and Type 1 teams will find this program a valuable refresher and tune-up opportunity. This experiential, high-intensity leadership program helps participants learn strategies for issues associated with quickly building operational synergy in temporary teams: managing diverse resources, interfacing with community cooperators, and leading operational planning extending into a strategic timeframe. The program centers on a multi-day, 16-hour simulation mirroring, in real time, the progression of a growing emergency incident. Through several learning cycles, participants team together and learn from each other as they work through problems and issues in a time-critical environment. Participants come away with firsthand experience in the human behaviors required to put ICS into practice. They gain confidence in their ability to hit the ground running as an incident commander or as part of an incident management team. This program builds new trigger points and recognition skills that are directly transferable to future operations and incidents.

Graduates of our original comprehensive course can add to their knowledge and skills by enrolling in CSTI's new Terrorism II course. Where Terrorism I concentrated on understanding the threat, Terrorism II focuses on applying that advanced knowledge to intelligence issues and response considerations. This 5-day, 40-hour course will provide an update on current events and threats as well as introducing new topics and case studies. Topics include: Evolving Threats, Evolving Challenges, Fourth Generation Warfare: Implications for Law Enforcement, Environmental and Animal Liberation Extremists, Agroterrorism, Terrorism and the Media, Legal Aspects of Intelligence, Radicalization in the Prison Systems, Community Information Networking, Protecting Key Assets, Case Studies, Threat Forecast

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Terrorism I or consent of course manager. While Terrorism I concentrated on International Terrorism, Terrorism II focuses on understanding and countering the threat from domestic terrorism and domestic terrorist groups

Mission Area(s):

- Prevent

This is the capstone course in CSTI's terrorism curriculum. Each presentation will contain a review of current terrorist incidents worldwide and current political events and trends. Students will develop and present case studies of specific incidents and/or best practices in antiterrorism and counterterrorism. Each iteration will also focus on a single seminar topic such as in-depth study of a geographic region and its problems, new developments in technology, sociopolitical issues or other advanced study areas.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Terrorism I and Terrorism II or consent of course manager. This course is designed for graduates of Terrorism I and Terrorism II to apply the knowledge and skills obtained in those courses to develop counterterrorism strategies in simulated war games.

Description of Course: 4-day/32-hr. course This course provides participants with the in-depth knowledge and skills necessary for effective exercise design for WMD /Terrorism events. Intended for the jurisdiction, agency, and organizational exercise design teams, this course is conducted on a host basis using an actual Emergency Operations Center. Design teams develop, conduct and evaluate a functional terrorism exercise for the host jurisdiction or organization. The functional exercise, designed by the students, will be held the last half-day for the host's emergency management personnel.

This four day course is designed to give the law enforcement field patrol supervisors and managers a comprehensive four-step Critical Incident Response Plan that they can utilize to manage any large-scale criminal events, man-made disasters or natural disasters during the vital starting minutes and hours of the incident. The course then moves into showing the students the application of this same plan that they will use on a daily basis, to the complex and wide variety of terrorist incidents. Case studies of various critical incident response events will be used to highlight the points of instruction. After mastering the concepts of the Critical Incident Response Plan, the students then move into application of the plan through a series of practical tabletop exercises. These exercises will increase in both the level of scope and difficulty and will be conducted in both individual and group formats. These exercises will allow the students to formulate priorities, develop plans and manage a wide variety of emergency incidents, including terrorist events.

Module 1 Terminal Learning Objectives (TLO): Participants will be able to describe the various interoperable communication initiatives. Enabling Learning Objectives (ELO): At the conclusion of the module, Participants will be able to: - Describe the need for effective interoperable communication - Define interoperability - Describe the Interoperable Communication Continuum - Define CALSCIP's definition of interoperability - Describe the National Emergency Communication Plan - Describe a Tactical Interoperability Communication Plan - Describe the Incident Command System - Describe the Communication Leader role

Module 2 Terminal Learning Objectives (TLO): Participants will be able to describe the various levels of governance. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to describe: - Levels - Administrative - Operation & maintenance - Working groups

Module 3 Terminal Learning Objectives (TLO): Participants will be able to describe various interoperable communication technology concepts. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Describe the various frequency band characteristics - Describe the programming of the system & the tones that emit from their radio - Activate and clear emergency button activations - Describe their systems layout & equipment - Describe redundancy modes & how to respond to them - Describe their interoperable communication resources

Module 4 Terminal Learning Objectives (TLO): Participants will be able to more effectively utilize their radios, fleetmaps/channel guides and CALIFOGs. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to utilize: - Radios - Fleetmaps/channel guides - CAL IFOG

Module 5 Terminal Learning Objectives (TLO): Participants will be able to create interoperable communication solutions for planned and unplanned events. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Create communication solutions to plan for planned & unplanned events.

Module 6 Terminal Learning Objectives (TLO): Participants will be able to describe the different levels of SOPs. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to describe: - Levels - Agency specific - Equipment - Discipline Specific

Module 7 Terminal Learning Objectives (TLO): Participants will be able to create interoperable communication solutions for unplanned events. Enabling Learning Objectives (ELO): At the conclusion of this module, Participants will be able to: - Utilize their channel guide/fleet map - Utilize their CAL and Regional IFOG - Create interoperable communication solutions for unplanned events. - Create interoperable communication solutions for unplanned events when all else fails.

Module 8: Course Review and POST Test

This is a 16-hour combined course of instruction which will provide comprehensive information and descriptions of the responsibilities of the organizational elements within each section of the ICS and describe the general duties of each organizational element including staffing considerations and reporting relationships. In addition, the course will expand on and explain each command and general staff position in terms of principle responsibilities and importance to the organization. It will include guidelines for activation of the command and general staff positions and the role of the deputies and assistants are discussed. Relationships and duties are covered for each command staff member and for agency representatives. The course is divided into four modules that include the following topical areas: 1) Introduction/Course Overview, 2) Incident Command System Review, 3) Incident Action Planning, 4) Incident Command System Organization, 5) Final Table Top Exercise, 6) Course Review, and 7) Course Final Examination. The course contains five (5) table-top practice exercises and a final comprehensive table-top. The course is designed for and will be presented in an instructor-led format. Those persons attending this course must have successfully completed IS-700, ICS-100, and ICS-200 courses as a prerequisite. The course meets or exceeds all California and federal training requirements as of the submission date.

Course Objectives:

No Objectives Defined.

Course Active?: Yes

Sponsoring State: CA**Course Level:** Management**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 32.0**Duration (in Days):****Course Description:**

This intense, hands-on and interactive workshop uses actual "inside the command post" video footage, helmet camera footage, radio traffic and post-incident analysis to meet learning objectives. In addition, simulation software is used and will streamline the components of Strategy/Tactics, SOG's and ICS. We synthesize these 3 key ingredients to help students drastically improve the way they command their next incident, or fulfill the role of division/group supervisor, branch director, unified incident commander, etc.

Actual incident video and simulations that span Type 1-5 incidents will be utilized, including residential, multi-family, apartment, commercial, big box, strip mall, high rise, wildland, and wildland/urban interface fires, as well as hazardous material, multi-casualty, active shooter, and terrorist acts (CBRNE/WMD incidents). Students will participate in approximately 25 simulation exercises, including Type 1-3 incidents in which an area command, EOC (emergency operations center), multiple ICP's (incident command post), and a JIC (joint information center) are utilized by the students.

With the advent of the National Incident Management System (NIMS), the safe, effective and efficient use of ICS has continued to be a challenge for most agencies across the United States. The complexity of CBRNE incidents makes them particularly difficult to apply ICS in the multi-disciplinary environment required for the response and recovery of these incidents. While agencies intend on using ICS on a daily basis, proper preparation for more significant incidents requires in-depth practical training, application and evaluation processes.

To ensure successful command and control at complex/multi-disciplinary incidents (WMD/CBRNE), training and application must be initiated at the Type 4-5 incident level. The use of ICS on a daily basis (on Type 4-5 incidents) will strengthen the understanding and use of the Incident Command System and improve the outcome of a sentinel event (Type 1-3 incidents) in the future.

Most agencies do not have the resources required for in-depth training and preparation of ICS for complex incidents. Incident command skills must be developed and maintained to ensure proper application. Training that utilizes "inside the command post" video of actual incidents, helmet camera footage of task and tactical levels of operation, post incident analysis, and in-depth simulations is rare, yet is extremely effective.

In addition, the key points of integrating multiple-operational (fire, medical, law, hazardous material, etc.) objectives into one incident action plan, utilizing ICS, are critical. Incident operations will become more safe, effective, and efficient, thus resulting in more civilian lives saved with less injury to our responders.

Course Objectives:

At the end of this course, participants will be able to:

- To ensure successful command and control at complex/multi-disciplinary incidents (WMD/CBRNE), training and application must be initiated at the Type 4-5 incident level.

Other Prerequisites:

ICS 100/200 IS 700

Course Description:

Description of Course: The ICS-300/ICS-400 train-the-trainer course is designed to meet or exceed both the California SEMS and the NIMS requirements for supervisory and management personnel and to prepare instructors to deliver the 16-hour 300-400 Basic Course. It will provide comprehensive information and descriptions of the responsibility of the organizational elements within each section of the Incident Command System (ICS). It will also described and illustrate the general duties of each organizational element, terminology, staffing considerations, and reporting relationships. This 20-hour train-the-trainer course is designed to be delivered in eight (8) modules. The topical areas for this course include: 1) Introduction/Course Overview, 2) Trainer Orientation, 3) Incident Command System Review, 4) Incident Action Planning, and 5) Incident Command System Organization, 6) Comprehensive Table-Top Exercise, 7) Course Review, and 8) Course Final Examination. The course contains a total of eight (8) table-top exercises and the final comprehensive table-top exercise. Participants must have successfully completed the POST 24-hour train-the-trainer course as a prerequisite requirement or have prior equivalent experience that included training in IS-700 & IS-800, ICS-100, and ICS-200. This course meets or exceeds all California and federal training requirements as of the date of submission.

This course is not about tactics, but rather the fundamental doctrinal principals from which tactics are derived. It defines and describes time honored concepts such as tempo, initiative, density, deconfliction, fog, and friction and their impact on successful resolutions for tactical operations of all types. Methods for conducting a terrain analysis, envisioning and achieving an end state developing and employing asymmetric strategies and building an effective tactical response are also covered. It is intended to be challenging and intensive and will require demonstrations of mastery, to include practical applications and written examinations. Consequently it should be undertaken only by students who seek to better understand and apply these fundamental doctrinal concepts in developing effective and efficient strategies and tactics. Effectively responding to civil disturbances (field force) terrorist attacks, barricaded suspects and hostage situations as well as natural disasters such as earthquakes, floods and fires are part of the training program.

SEMS and NIMS require that certain courses be completed by all who may be tasked during an emergency; response through recovery. OES has developed this 12 hour SEMS/NIMS/ICS, A Combined Course. This comprehensive course compares and contrasts SEMS, NIMS, and ICS. Your trainers may conduct one course that will meet the requirements of SEMS Introductory Course, ICS 100, and the NIMS Awareness course by using this curriculum. Target audience's needs and prior training and experience are taken into account when deciding which pieces of this curriculum you choose to use. This Combined Course fulfills all objectives of the Standardized Emergency Management System (SEMS) Introduction Course, the Incident Command System (ICS) 100 and the National Incident Management System NIMS - IS700, participants will receive credit for each of the three courses. This course differs from other courses in that it teaches in depth emergency operations center and state operations center roles and responsibilities. It is intended for all disciplines and all hazards and includes comprehensive modules on EOC processes including action planning, advance planning, situation analysis, executive responsibilities, the five functions roles and responsibilities.

The AAIM course is designed to provide All-Hazards Incident Management Teams (AHIMT) Command and General Staff training in effectively engaging various government entities during all-hazards incidents. The course includes over 75 hours of pre-course assignments and 48 hours of instructional information with three realistic scenarios to reinforce course content. The pre-course work is obtained from the FEMA Independent Study program and can be adjusted to fit the IMT preparing for the AAIM Course.

The target audience of AAIM is established AHIMT or individual Incident Commanders and Command and General Staff members working together as an AHIMT. AAIM uses the classroom to present and discuss current incident management tools and processes through instruction from all-hazards subject matter experts. Using a series of three 8 to 24 hour all-hazards exercises, participants will then exercise what they've learned. The AAIM course is intended to strengthen the AHIMT's capabilities of all public safety agencies including fire, law enforcement and emergency medical agencies in collaboration with local, state and federal governments, emergency managers and emergency operations centers public health, public works, transportation, utility, and non-governmental organizations (NGO).

Students will be given an opportunity to obtain and demonstrate knowledge of agencies, entities and plans, command and coordination, and risk management issues that are used in an all-hazards response. Students will also learn and demonstrate knowledge of how internal and external influences and fiscal considerations impact all-hazards responses. During scenarios, students will evaluate options and determine the best solution using methods for interagency coordination under the National Response Framework. Students will also perform as an Incident Management Assistance Team (IMATs) and oversee Points of Distribution (PODs) during all-hazards incidents.

Course Objectives:

At the end of this course, participants will be able to:

- Manage human-caused and natural-disaster incidents
- Describe the complex roles and reporting under unified CMD or multijurisdictional conditions

Other Prerequisites:

Minimum student qualifications for AAIM include completion of S-420 –Command and General Staff and/or USFA O-305 Type 3 Incident Management Team Course, Command and General Staff training, I-100 to I-400, IS 700a, IS 800b and other required training specific to their IMT position.

Description of Course: This 4-hour course provides agency/organization command staff and Executive/Senior Executives with an overview of the various incident management systems available in California and nationally. Upon completion of this course the participants will be able to assess their organizational emergency management programs and their individual responsibilities as managers and will have met the requirements of the California SEMS Executive Course, the federal ICS-402 Overview for Executives/Senior Officials, the IS-700 Course (Introduction to NIMS), and the IS-800 Course (National Response Plan Orientation). This course will be delivered in an instructor-led classroom training session and is designed to provide a basic understanding of ICS, Unified Command, and Multi-agency coordination for those persons responsible for establishing or implementing policy, but who normally are NOT part of an on-scene ICS organization. The course has been designed using twenty (20) enabling objectives. Objectives 1-4 are from the California Approved Course of Instructions' Executive Course; objectives 5-14 are from the DHS IS-700 Course; and objectives 14-20 are from the DHS IS-800 Course. The course includes the following topics: 1) Course Introduction/Overview, 2) Why Emergency Plans Fail, 3) SEMS/NIMS/ICS, 4) Case Study, and 5) Course Review. This course meets or exceeds all California and federal training requirements as of the date of submission.

Sponsoring State: CA**Course Level:** Management**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):** 1.0**Course Description:**

A comprehensive overview of the role of local law enforcement investigators in the global war on terror and local law enforcement's understanding and integration of criminal information and intelligence. An in-depth examination of criminal acts committed in support of terrorism, terrorism indicators and warning signs. Students will explore ways to access available investigative resources to better assess an emerging situation. Multiple terrorism case studies with the focus being on recent homegrown Islamic terrorist plots and Islamic radicalization. Many of these case studies are derived from local incidents which highlight terrorism indicators and how local law enforcement recognized and reported them.

Course Objectives:

At the end of this course, participants will be able to:

- Following completion, students will have a basic understanding of Islam, the rise of Islamic Fundamentalism, the goals of Islamic terrorist groups and how to recognize indicators of violent extremism.
- Participants will learn the goals, tactics and reasons for terrorism against the United States. They will learn the value of intelligence and how local law enforcement plays a vital role in both gathering and accessing intelligence in the global war on terror.
- Following completion students will be able to understand and recognize indicators of terrorist activities in their daily work assignments and will learn how to report their findings.

This is a 20-hour course of instruction which is a modification to an existing course CA-030-RESP. The course has been completely reviewed and contains all required information and course content based on federal requirements for ICS 300. The course describes the general duties of each organizational element including staffing considerations and reporting relationships. In addition, the course will expand on and explain each command and general staff position in terms of principle responsibilities and importance to the organization. It will include guidelines for activation of the command and general staff positions and the role of the deputies and assistants are discussed. Relationships and duties are covered for each command staff member and for agency representatives. The course is divided into seven modules that include the following topical areas: 1) Introduction/Course Overview, 2) Incident Command System Review, 3) Unified Command, 4) Resource management, 5) Incident Action Plan, 6) Demobilization and Transfer of Command, and 7) Course Final Examination. The course contains ten (10) table-top practice exercises to give participants an opportunity to participate in hands-on activities.. The course is designed for and will be presented in an instructor-led format. Those persons attending this course must have successfully completed IS-700, ICS-100, and ICS-200 courses as a prerequisite. The course meets or exceeds all California and federal training requirements as of the submission date.

Sponsoring State: CA**Course Level:** Management**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 40.0**Duration (in Days):** 5.0**Course Description:**

This 40 hour course *In the Edge of Chaos: Response to Critical Incidents Part 1* is comprised of an on-line MOODLE-type environment where students will participate in discussion threads and writings as well as in-class time for both theoretical instruction and participation in reality-based scenario training. The course is designed to improve the student's ability to function within the initial phase of chaos, or "golden hour," inherent in all critical incidents - that initial response period during which the crisis may still be fluid, meaningful information is difficult to obtain and situational awareness seemingly impossible to establish. By identifying the missing piece of NIMS the student will be presented strategies and exercises to improve the ability to apply intuitive sense-making strategies and primed decision making while working through chaos and toward the implementation of productive, operational incident command.

Course Objectives:

At the end of this course, participants will be able to:

- Improve the ability to apply intuitive sense-making strategies and primed decision making while working through chaos and toward the implementation of productive, operational incident command.

Other Prerequisites:

IS 700, IS 800

Primary Core Capability:

Situational Assessment

The California Emergency Medical Services Agency (EMSA) will activate a state-run Mission Support Team (MST) to support deployed state medical response resources in state declared events. The MST provides management and coordination of state emergency medical response resources and technical expertise deployed for disaster response. Deployment of the MST will always be done in accordance with the SEMS system and guidelines. This course provides the guidelines for operation, organization, position descriptions, checklists, administrative information, and personal equipment for the supervision and support of medical assistance and specialty teams. This course is specifically designed to train MST members on their roles and responsibilities, operational policies and procedures, and requirements to effectively deploy staff, function and demobilize a Mission Support Team (MST) organization.

The program is based on the need, identified to prepare qualified interpreters to provide sign language interpreting services during an emergency or disaster response, including but not limited to evacuation shelters and media press conferences as designated by the California Emergency Management Agency. The customized training provides an overview of the State Emergency Management System (SEMS) and the National Incident Management System (NIMS) as context for the roles and responsibilities of sign language interpreters including protocol for media events and shelters, and lessons learned from previous disasters. The training session is eight hours and includes the following: Review of case studies from previous disasters related to deaf and hard of hearing individuals access to information and shelters. Review the governmental structures, specifically the Standardized Emergency Management Systems (SEMS) and the National Incident Management Systems (NIMS), that are used to manage all aspects of an emergency and cover the types of disasters or emergencies that are possible in California. Provide overview of media relations and public information system, emergency communications, press conferences and media events protocol, and the role of Disaster Response Interpreter. This module includes a mock media exercise of a press conference and media interviews utilizing participatory dialogue and situational questions and answers. Provide overview of emergency shelters set-up, management, and recovery services, and the role of Disaster Response Interpreter. This module includes a mock shelter exercise of an assessment interview utilizing participatory dialogue and situational questions and answers. Provide an overview of the Disaster Response Interpreter program policies and procedures and discuss interpreter readiness and preparation for deployment. Conduct post test and course evaluation and close with concluding remarks. 2 1hr exercises are conducted as part of training.

Intent into Action: Advanced Leadership for the Command and General Staff (Intent into Action) is an executive-level training program for those serving on Command and General Staffs (C&G) of Incident Management Teams (IMTs) that respond to WMD, CBRNE, and other all-hazard incidents. The program offers critical training for the 'Respond Mission' of the National Response Plan, specifically for 'On-Site Incident Management-Develop and maintain training and exercise programs.' Intent into Action offers students the tools and techniques necessary to integrate leadership and incident management acumen for strategic results in large-scale incidents. This course fosters the development of a Mission-Driven Culture as well as the professional staff ethos that underpins it. This training focuses on developing the critical capabilities that are key to an effective response to WMD or CBRNE terrorism. Specifically, it advances and reinforces the following C&G capabilities: *¿*h Working as a cohesive and adaptive decisional team to manage complex incidents. *¿*h Developing and projecting commander's intent throughout the incident organization. *¿*h Organizing and prioritizing disparate and emerging problem sets to build concentric objectives and strategies to meet all response requirements. The chief component of the program is a simulation of emerging catastrophic events (including bombings and arson attacks against industry perpetrated by a terrorist cell) that precipitate a multitude of strategic problems. The natural command stresses produced by an act of terrorism event are fully represented but are focused through a strategic- or theater-level framework (in contrast to having a focus on tactics). Throughout the simulation, students act as a C&G to assess the political, security, economic, infrastructure, and information aspects of the unfolding situation and incorporate them into the development of objectives, strategies, and tactics. The program meets executive-level training requirements for IMTs that respond to WMD, CBRNE, or other all-hazard incidents. Within the context of the Target Capabilities List, A companion to the National Preparedness Guidelines, it focuses on training for the C&G of Type-2 IMTs, which puts the program squarely in 'On-Site Incident Management-Develop and maintain training and exercise programs,' a critical component of the Respond Mission.

Sponsoring State: IL**Course Level:** Management**Delivery Type(s):** Residential**Duration (in Hours):** 8.0**Duration (in Days):****Course Description:**

The goal of this 8-hour course is to train emergency leaders and managers to operate together within the National Incident Management System at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event that is of a magnitude where the local NIMS-based IMS is augmented by a Unified Command System. The SAA goal of this course is to prepare local first responders to operate as a local member of regional response teams within the NIMS at a CBRNE WMD event requiring statewide response. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This course is designed for training participants with experience in incident to augment IMS with a Unified Command component. This common statewide incident management system will enable responders at all levels to work together more effectively and efficiently to manage domestic incidents no matter the size or complexity. During this course the students shall accomplish the following terminal objectives: Demonstrate use of a Joint Information System for public information; Demonstrate managing resources; Demonstrate common communication and information management systems; Identify ways in which NIMS affects preparedness and influences technology and technology systems; Participate as an agency representative in a mock incident that utilizes a local NIMS-based IMS that escalates into an incident requiring a Unified Command. The Unified Command Course has been developed and sponsored by the Illinois Terrorism Task Force as a critical component of the Illinois Homeland Security Training Strategy. It is based upon the principles of Incident Command as established in the National Incident Management System (NIMS) and is intended to meet the requirements of Homeland Security Presidential Directives (HSPD) 5, 7 and 8. Furthermore, this program meets the Universal Task List: Planning, Coordination, and Support tasks PCS 4-7; Incident Management tasks IM 1-IM 15, and Incident Prevention and Response tasks IPR 1- IPR 15. Today's technology has taken Public safety wireless communications far beyond the day's of pushing the button and talking. The ARMER statewide 800MHz system is a highly sophisticated system with a multitude of features and it provides unique operational flexibility to the Public Safety community. This sophistication in turn requires substantial and critical training before a user is prepared to operate on the system and/or use it to its full capabilities and thus solve interoperability gaps. Initial and ongoing user training is integral part of the entire communication system. This course will provide the mobile and portable user and the communication s center user with the understanding of the 800MHz system capabilities,procedural/protocal implications,equipment operations, equipment functions, and interoperability solving capabilities. Class room scenario based training will be focused on operational use of local specific equipment and the ARMER 800MHz system capabilities. In addition the scenario based training will address how the ARMER 800 MHz system facilitates the Incident Command System and how first responders can use in-the-field information resources more efficiently not only during daily operations but during prevention, responseto, and recovery from acts of terrorism or castrophic events.

This course NIMS: Advanced ICS, is a 24-hour course designed to meet NIMS. This course addresses the functions of command within an Incident Command System (ICS). The focus of this course is on activating the necessary elements on the prolonged incident and the various forms and documentation to assist in the incident. Discussion includes the responsibilities of each section chief and the various branch, division, group and unit leaders, and includes a short review of ICS and the National Incident Management System (NIMS). This course will provide a valuable command learning experience in a 'real-time' learning environment. The course is highly recommended for emergency response personnel interested in learning how to effectively operate within a fully functional incident command system.

Simulation Based Training for Initial Response Personnel: A Unified Command All-Hazards Approach to NIMS/ICS, CBRNE, and WMD Incidents

NM-002-RESP

Sponsoring State: NM

Course Level: Management

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 24.0

Duration (in Days):

Course Description:

This program is a combination of classroom instruction and practical hands-on, which offer scenarios utilizing simulation exercises on a Model City Simulator the participant the opportunity to manage several types of critical incidents utilizing an 'All Hazards Approach.' Participants will work through a four phased 'Critical Incident, Event Activity Flow©' that tracks Event Characteristics, Agency Response, and Desired Outcomes for any incident. The course utilizes the National Incident Management System (NIMS/ICS) to build an effective 'Decision Making Team' to bring about a successful resolution to the event. Interaction through Unified Command with fire, emergency medical services, as well as other units of government, provides key decision makers with a framework in which to evaluate their community's readiness for a major incident. Pre-event planning utilizing the ICS model will also be developed and practiced. This program will be delivered at the client site, in twenty-four hours, over three-days. The program makes extensive use of simulation exercises, problem solving scenarios and case studies. Sessions will be interactive and will not only examine the topics identified, but will encourage participants to think introspectively. The program content focuses on a set of core ideas and concepts, which allow participants to relate them to actual work situations while enhancing their decision-making skills. The uniqueness of this program is that within a training environment participants will be provided a positive and emotionally charged simulated experience, which incorporates the management of a critical incident utilizing both the Model City Simulator and a fully functional Command Post.

On a daily basis, state and local public officials (including elected officials and state and local administrative/management personnel) are required to make decisions regarding issues, policy, and operations. Within the context of homeland security, these officials are required to render decisions on a day-to-day basis and find themselves in circumstances that necessitate critical decision making related to crises that affect the safety and security of the citizens for which they are responsible. Moreover, during protracted high consequence events, critical decisions are often made by decision-makers that are under a great deal of physical and mental stress. Finally, final decisions are often the result of group/team input, comments, and recommendations. The decision-maker is responsible for selecting the best course of action from a myriad of alternatives. In this course, participants explore the decision-making process for daily activities and crisis situations. Critical Decision Making during Crisis provides discussion regarding overcoming hindrances and obstacles to effective decision making. The course also uses problem-solution situations and scenario-based activities to address critical decision making under stress.

Course Objectives:

No Objectives Defined.

This course will train the criteria required for Ambulance Strike Team Leader position required by NIMS Ambulance Strike Team Types I-IV. Recent large-scale catastrophes and terrorism incidents have demonstrated the need to apply the Strike Team concept (an organized group of personnel and equipment applied to an emergency response), first implemented during massive wildfire campaigns, to the Emergency Medical Services (EMS) response discipline. This course will train EMS personnel in leadership or management positions to serve in the role of Ambulance Strike Team/Medical Task Force Leader. Participants will be taught to prepare for, respond to, and recover from significant events while functioning in a supervisory role over trained personnel ambulances on Mutual Aid assignments to jurisdictions confronted with large numbers of patients requiring mass care or medical evacuation.

Course Objectives:

At the end of this course, participants will be able to:

- Prepare for, respond to, and recover from significant events while functioning in a supervisory role over trained personnel ambulances on Mutual Aid assignments to jurisdictions confronted with large numbers of patients requiring mass care or medical evacuation.

Other Prerequisites:

ICS-100, 200 &300 or equivalentAWR-160 or equivalent3 Years Supervisory experience

This course is designed to offer practical application of the skills needed to work in an Emergency Operations Center (EOC). Existing emergency management procedures based on the National Incident Management System (NIMS) and the Incident Command System (ICS) are adapted to the unique requirements of EOC operations. Participants and jurisdictions are provided with instruction on, and opportunities to perform emergency management and decision-making skills necessary to safely and effectively manage large-scale, all-hazards events. The course utilizes a computer-driven simulation to help participants gain situational awareness, perform incident management and staff responsibilities, and demonstrate information management and decision-making skills particular to operations in an EOC.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

None specified; but completion of FEMA IS-275: Role of the Emergency Operations Center in Community Preparedness, Response & Recovery and FEMA IS-701: National Incident Management System Multi-Agency Coordination System are highly encouraged.

Sponsoring State: TX**Delivery Type(s):** Residential**Course Level:** Management**Duration (in Hours):** 8.0**Duration (in Days):****Course Description:**

This course allows Incident Commanders and other ICS positions the ability to refine and reinforce the skills and knowledge necessary to successfully respond to an incident involving any man-made or natural hazard. Through the use of a state-of-the-art simulation facility, participants are cast into the initial response of an incident and expected to establish a formal incident command post. The simulator is intended for participants from any discipline to practice with the response protocols and procedures specific to their jurisdiction within the Incident Command System. Through eight different simulations, each utilizing a variety of scenarios, participants will learn and gain confidence in a physically safe, non-consequential environment. These simulations are real-time scenarios that change in nature depending on the participant's decisions and strategies. The HFD Strategic Simulator is a unique facility that utilizes advanced, custom-designed technology to actively engage the participant in a totally immersive visual and auditory environment designed to challenge and enhance the participant's abilities.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Participants should function or be eligible to function as an Incident Commander as defined by NIMS. It is also highly recommended that the incoming participant has completed NIMS ICS-300, IS-700, and IS-800 prior to course attendance.

Performance Courses

Volunteer Reception Center

AZ-001-RECV

Sponsoring State: AZ

Course Level: Performance

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 6.0

Duration (in Days):

Course Description:

Disasters and emergencies often lead to vastly increased work-loads that go beyond the capabilities of response agencies. In order to mount effective response efforts, agencies at all levels often rely on volunteers to augment staff. The management of large numbers of volunteers that are not currently affiliated with volunteer disaster response and recovery organizations becomes critical to the success of state emergency management. When this occurs the local jurisdiction will need to stand up a Volunteer Reception Center (VRC). A VRC provides a specific location, staffed by skilled/trained community volunteer managers capable of screening, interviewing and referring citizens in a professional manner. The VRC encourages collaborative planning and implementation on a county and/or regional basis to meet first responders' needs, contributing to a positive public perception of cooperation on mutual concerns. With that, this course was designed to train state, county, local and tribal governments and non-government entities to be able to establish a Volunteer Reception Center.

The goal of this 200-hour Technical Rescue Training (TRT) program is to prepare local responders to operate as members of a regional response and rescue team within the National Incident Management System during a Chemical, Biological, Radiological, Nuclear or Explosive incident (CBRNE), or other catastrophic event. The TRT program will teach responders to coordinate and conduct search and rescue response efforts for all hazards, including searching affected areas for victims; and locating, accessing, medically stabilizing, and extricating victims from the incident area. Over the course of the program, students will learn the skills needed to safely perform rescue operations in the following areas of expertise: Structural Collapse, Rope Rescue, Swift Water and Floods, Confined Space Search and Rescue, and Trench and Excavation Search and Rescue. This training will utilize the Incident Management/Unified Command structure to assess a technical rescue hazard within the response area, identify the level of operational capability, and establish operational criteria. This course meets or exceeds National Fire Protection Association (NFPA) 1670: Standard on Operations and Training for Technical Search and Rescue Incidents, which identifies and establishes levels of functional capability for conducting operations at technical search and rescue incidents, while minimizing threats to rescuers. This TRT program directly supports Emergency Support Function #9, 'Urban Search and Rescue' of both the National Response Framework, and the Arizona State Emergency Response and Recovery Plan. Additionally, this course covers several critical tasks and performance measures outlined in the Target Capabilities List (2007), Search and Rescue Operations (Res.B4); as well as indirect links for tasks relating to hazardous materials response, emergency public safety and security, mass care and fatality management.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Firefighter I and II Certification; EMT-B Certification or higher equivalency; NFPA 472, Standard for Competence of Responders to Hazardous Materials/Weapons of Mass Destruction Incidents; CPR Certification; Completion of previous modules of this course will be required for some subsequent modules. These requirements are noted with each module's prerequisites.

This course is intended to introduce certified bomb technicians to current terrorist tactics, techniques and procedures (TTPs) and some of the procedures being employed by international bomb squads to counter the terrorist threat. The course has been designed in eight modular segments to give the host bomb squad the option of tailoring the course to meet their specific requirements. The course can be delivered in one of four possible formats that emphasize different skills and techniques, these are:

- Threat Assessment and IED Electronic circuits
- Threat Assessment, IED Electronic Circuits and Disrupter practical exercise
- Threat Assessment and practical scenario led exercises
- IED Electronic circuits

Upon completion of this course, participants will be able to discuss current terrorist TTPs and identify some of the additional considerations and countermeasures required to successfully deal with them given an IED response/scenario.

At the conclusion of the 'First Responder Operations-Weapons of Mass Destruction' (FRO WMD) class the participants will be able to better recognize the presence of WMD, including Nuclear, Biological, Chemical or Explosive weapons and implement actions to protect themselves and the public from the effects of an NBC+E incident (those actions taken should be 'Defensive' in nature). This is a 'Specialty' course that compliments CSTI's 'Hazardous Materials First Responder Operations' (FRO) course.

This course is designed to equip the student with the techniques and methods for using rope, webbing, hardware friction devices, litters in low angle rescue situations. Areas covered include: Rope and related equipment, anchor systems, belay and safety lines, stretcher lashing and rigging, mechanical advantage systems and single line and two line rescue systems. Course Objectives: To provide the student with. a) Information on rope rescue equipment, rescue knots and hitches, anchor systems, system attachments and fall restraint, belay/safety line systems, load-releasing devices. b) Methods and techniques used to inspect and maintain rescue rope, webbing, and hardware. c) Methods and techniques to tie knots and package victims and rescuers. d) Methods and techniques for using rescue equipment to build lower/raise (mechanical advantage) systems. e) Information on rescue scene organization and management. f) An opportunity to demonstrate and apply basic low angle rope rescue techniques. g) Optional information on litter walkouts and ladder systems used in low angle rope rescue operations. this course meets or exceeds NFPA 1670, CCR Title 8 Section 1670 State of California, ASTM F-1740, Field Operations Guide-Fire Scope, OSHA Regulations, US&R Operational System Description, ICS-US&R-120-1.

This is an intensive 2 day, 16 hour, training course designed to assist Law Enforcement, Fire Services and Emergency Medical Services personnel in recognizing potential terrorist/sympathizer activities during routine conduct of their duties. Each day consists of classroom training and a field exercise. The field exercises are designed to allow students the opportunity to employ and reinforce the skill sets learned during classroom instruction. Day 1 consists of 4 hours of intense classroom instruction and discussion. Topics will include in depth training in the following areas: - Motivational analysis of becoming a terrorist - Terrorist cell structure and methodologies - Terrorist/ criminal capabilities Scenario 1: Students will act in their normal capacities. They are given the mission to participate in an interview with role players acting as domestic terrorist cell members and conduct a physical investigation of a possible safe house ostensibly used by the cell. Evidence and clues will vary from the obvious to the very subtle. Day 2 consists of 4 hours of intense classroom instruction and discussion. Topics will include in depth training in the following areas: - Recognition of covert communications - Recognition of targeting activities - Recognition of Explosive Devices Scenario 2: In this scenario, students are placed into teams and assigned missions to target and gather intelligence on a critical infrastructure facility or college in the local community. During this scenario, students will act as a terrorist cell and attempt to covertly develop target folders for future exploitation. From these experiences, students will learn firsthand what to look for when it comes to terrorist targeting activities

Terrorist Activity and Subversive Behavior Awareness DAY 1: - Introduction - Motivational analysis of becoming a terrorist - Terrorist cell structure and methodologies - Terrorist/ Criminal capabilities - Recognition of explosive devices - Lunch - Prep for practical exercises - Room Scenario - Conclusion

DAY 2: - Recognition of targeting activities - Recognition of targeting activities cont - Recognition of covert communications - Recognition of covert communications cont - Lunch - Street Scenario - Student Presentations - Conclusion

NFPA ProBoard certified; this course is designed to train participants how to respond defensively to a hazardous materials release. Topics include: what constitutes a 'hazmat material', prevention of spread and exposure, protection of people, the environment and property in the immediate vicinity. Participants will be involved in both technical training and exercises to practice safe and competent response to a hazmat materials emergency. CSTIs multi-disciplinary approach combines lecture, group activities and exercises. This program exceeds OSHA requirements for Hazmat training programs for the fire service, law enforcement agencies, health departments and private industry. Hazmat First Responder Operations meets OSHA requirements under 29 code of federal regulations (CFR) 1910.120(Q) and the California Code of Regulations, Title 8, section 5192(Q). Anyone who responds to a Hazmat or WMD incident (ie, fire, law health, transportation, public works, private industry) must have a minimum of this level of training.

HazMat/Weapons of Mass Destruction Instructor Certification For Trainers 2-day/16-hr. course
Prerequisite: WMD First Responder Awareness, Operations, Incident Commander, HazMat Technician Specialists Terrorism, WMD First Responder Operations for Law Enforcement, WMD Hospital Operations and Decon For experienced trainers, this accelerated instructor course focuses on the review of curriculum, instructional techniques, and CSTI policies and procedures to reinforce previous instructor training. When participants have completed this course, they will be certified to instruct the HazMat and/or WMD courses. Participants in this abbreviated class must have previous training experience. The Hazardous Materials Instructor Certification Program was implemented in 1987 to expand hazardous materials emergency response training throughout California. In 1995, a weapon of mass destruction emergency response training was added. Since then, over 1700 hazardous materials field instructors and 350,000 emergency personnel have been certified. This may be the most efficient Hazmat/WMD training program an organization will ever undergo; many will benefit from the experience of just a few. It is State certified. It is designed to prepare participants for hazardous materials and weapons of mass destruction training by providing complete instructional skills. The program focuses on basic training techniques, supplies, instructor guides, audio/visual resources and performance standards to fulfill certification requirements. Certification will be granted under CA Gov. Code Section 8574.19-23 and CA Code of Regulations Title 19, Section 2516-2560. You may become certified as an instructor of the following Hazardous Materials courses: * Haz Mat/WMD First Responder Awareness/Operations * HazMat/WMD First Responder Operations Decontamination * HazMat/WMD Incident Commander * HazMat/WMD Technician, Level A-D * Ha Mat/WMD Specialist, Level F-G * Emergency Medical Response * Mass Decontamination * Hazardous Materials for Health Care * First Responder Awareness (Methamphetamine) * First Responder Operations (Methamphetamine) * Hazardous Materials Investigations * WMD/HazMat Operations for Law Enforcement Field Support * Assistant Safety Officer

Duration (in Days):

Course Description:

This course provides in-depth instruction to the HazCat WMD Detection and Classification System. Using the EntryCat and the HazCat System, students detect and classify threats posed by radiological sources, explosive substances, acid-oxidizers, all 31 treaty-banned chemical weapons, and biological agents. Students use the CommandCat Communication System, the EntryCat, the SampleCat and learn slide-making techniques and operation of the MicroCat, a phase-contrast microscope equipped with a high definition video camera to facilitate detection of biological potentials by the capture and transmission of images to a Local Response Laboratory where they may be evaluated for potential of threat. Students practice their skills at collecting and processing through the HazCat System unknown NBC agents.

The Safety Assessment Program (SAP) utilizes volunteers and mutual aid resources to provide professional engineers and architects, geologists and certified building inspectors to assist local governments in safety evaluation of their built environment in an aftermath of a disaster. The program is multi-hazard in response to all types of natural and manmade disaster causing physical damage, such as seismic, flooding, fire, wind, land movement and explosion events. Course will provide participants with basic background of the program in order to understand their role as safety evaluators. Participants will also become familiar with the different types of evaluations and how to use the forms, placards, the different types of structures and the impacts on the community, participants will conduct assessments and evaluations of various lifeline facilities, they will also know how to conduct evaluations for other types of hazards such as high winds, flood, fires and explosive events. Participants will also learn how to conduct themselves safely while they complete their work and be better prepared to protect themselves from exposure to hazardous materials.

Sponsoring State: CA**Delivery Type(s):** Mobile/Non-Resident**Course Level:** Performance**Duration (in Hours):****Duration (in Days):****Course Description:**

This course is designed to train Fire Fighters or other emergency personnel in basic heavy rescue techniques. Key topics include team organizations, ICS, rescue and environmental considerations, self protection and evacuation procedures for WMD events, personal protective equipment, decon, disposal and documentation, hazmat countermeasures, use of ropes, knots, rigging and pulley systems, descending, rappelling and belaying tools and techniques, use of cribbing, wedges, cutting/prying brought on by natural disasters such as floods, earthquakes, tsunamis, landslides, and acts of terrorism. Explosive events combined with chemical, biological, radiological and/or nuclear (CBRNE) weapons add a new dimension to the rescue scenario. Building collapses due to a WMD explosive event quite often contain hazardous materials and immediate danger to life and health situations. Rescuers now have to be trained and prepared to handle the extra measure of personal protective equipment that may be required performing a rescue successfully.

Terrorists and Active Shooters are a growing threat to public safety. The risk of mass violence in schools, hospitals and places of worship is increasing. Past incidents have shown that immediate and decisive action by people onsite can save lives. Pre-incident training can help reduce vulnerabilities and improve response. The Attack Countermeasures Training and Certification (ACT Cert) Mass Violence Prevention & Active Shooter Survival course teaches effective Prevention & Response. The course encourages people to become active participants in their own security and provides the knowledge necessary to prevent and respond to attacks. The course curriculum addresses the essential role of "First Preventers" in recognizing pre-attack indicators, and reporting early warning signs. It also teaches how to develop and implement preventive security measures to deter potential attackers and reduce vulnerabilities. The curriculum explicitly addresses the critical role of "Onsite Responders" during the initial moments of an attack. Course participants learn how to rapidly assess the threat, use cover and escape safely when possible, and how to barricade and hide from the shooter. Last Resort Survival Measures for stopping the shooter and controlling the weapon are practiced hands-on. Safe interaction and cooperation with Law Enforcement First responders (LEFR) is also taught. This program provides a Blended Learning solution. The training is delivered onsite as Hands-On-Training (HOT) and online as Web-Based-Training. The skills taught can be adapted by participants with no prior experience. The course material is designed to augment, complete, and complement previous training. Pre and post-tests are administered to document the knowledge retention and gain. A certificate of completion indicating course objectives is provided upon successful completion of the final exam. The content of this course is fully documented and was developed according to the National Training and Education Division (NTED) guidelines. The program has a cohesive train-the-trainer course with existing Certified Instructors delivering training in the several states. This program has been successfully taught to school staff, faculty, community leaders, healthcare and security professionals as well as public safety personnel since 2008. It is a cost-effective and sustainable training solution that can help make our communities better prepared.

Course Objectives:

At the end of this course, participants will be able to:

Participants will be able to recognize risks, pre-attack indicators, reporting early warning signs, and apply preventive security to deter potential threats. During initial moments of an attack participants learn how to rapidly assess the threat and escape safely when possible, how to use cover, concealment to barricade and hide from the shooter, collective last resort survival measures for fighting the shooter and taking control of the weapon and safe interaction with responding officers.

Officer Safety and Field Tactics in a Terrorism Environment is designed specifically for front-line personnel representing law enforcement and public safety organizations as these front-line personnel will serve as our first responders to terrorist attacks in this country. Presently our country has over 750,000 front-line law enforcement who will potentially respond to a terrorist attack in their respective cities. It is essential to train these agencies in the area of officer safety and field tactics relating to terrorist incident response. Although the front-line personnel in both law enforcement and public safety represent our terrorism first responders, the common complaint from these professionals is they are not appropriately trained to safely and tactically respond to attacks carried out by contemporary terrorist groups. Properly equipping our nation's first responders with the requisite safety and tactical skills not only enhances their response effectiveness, but also reduces their risk of death or serious injury. Many experts believe the future of homeland security, specifically the continued safety and security of America, relies largely on the sustained training, education, and vigilance of front-line law enforcement and public safety professionals. From a practical perspective, this is one of the most critical factors in terms of deterring, disrupting, or preventing future attacks within this country. Additionally, it becomes imperative to train our front line officers and public safety members to effectively recognize and safely respond to contemporary terrorist tactics associated with attacks against the homeland. The Officer Safety and Field Tactics in a Terrorism Environment course is designed to accomplish these critical training objectives.

This course introduces participants to key emergency management principles and practices, from all-hazard threat and hazard identification through whole community inclusive planning, response, and recovery activities. Students are assigned a role within a notional jurisdiction and specific EOC section and position training is provided. Using various threat scenarios ranging from a terrorist attack on a transportation hub to a natural disaster, a series of progressive discussion- and operations-based exercises are used to demonstrate ICS/EOC interface, incident response issues and multi-agency coordination.

Course Objectives:

At the end of this course, participants will be able to:

Upon completion of this course, participants should be able to: (1) Relate threat and hazard identification to a comprehensive emergency planning process; (2) Identify differences between an Incident Command Post (ICP), Department Operations Center (DOC) and Emergency Operations Center (EOC) in emergency response; (3) Identify the common sections and positions found in a jurisdictional EOC organized under the Standardized Emergency Management System (SEMS) and National Incident Management System (NIMS), and the basic responsibilities of those sections and positions; (4) Describe multi-agency coordination, resource requests between jurisdictions and California's mutual aid process; (5) Practice EOC activation and operational coordination; (6) Participate in an EOC Action Planning process; and (7) Describe the information flow and communication pathways in an EOC.

Course Design These offered training courses have been designed and customized by Priority 1 Air Rescue (P1AR) Training Division Instructors using operational and training experience employing specific knowledge in Search and Rescue Operations. Priority 1 Air Rescue's SAR training curriculum has been used world-wide to implement Basic and Advanced SAR Mission Operations for Military, Government, Commercial Operators, Law Enforcement Agencies and Helicopter Original Equipment Manufacturers (OEM). Course Certification Priority 1 Air Rescue provides FAA approved Part 133 Class D Human External Cargo Training. Students will receive upon successful completion certification to FAA Federal Air Regulations (FARS) and Canadian Air Regulations (CARS) standards for Human External Cargo (HEC), Class D operations training. This training program meets and/or exceeds FAA HEC training requirements and is EASA JAR Ops 3 HHO compliant. This training further prepares pilots and personnel who are assigned to perform duties on board a helicopter or personnel who are carried externally by a helicopter to be competent to conduct Class D External Load operations in a safe, effective and efficient manner.

Hoist Rescue Course Description and Duration: Five (5) days Five days of instruction is required to facilitate and recertify thirteen (13) Fire Rescue personnel as SO/RS and four (4) DNREC personnel strictly as RS. Approximately one day classroom (including a half day practical with static aircraft/APU) and four days of hoist flight training will be required. A notional course schedule is provided in the Appendix. All DSP pilots will be qualified and will have been recertified for HEC with P1AR prior to the beginning of this course. Each Fire Rescue/DNREC hoist SO/RS receiving recertification must complete the one-day ground school and safely accomplish the hoisting evolutions without any procedural or safety errors noted.

Short-Haul Rescue Course Description and Duration: Three (3) days Three days of Short-Haul instruction is required to facilitate thirteen (13) Fire Rescue personnel and four (4) DNREC personnel for Part 133 Class D Short-Haul Operations. Approximately one half-day classroom (with practical with static aircraft/APU), one half-day non-human external load short-haul training, and two days of flight time/short-haul training will be required. A notional course schedule is provided in the Appendix.

Duration (in Days):

Course Description:

The Advanced Highway Commercial Vehicle Weapons of Mass Destruction Training program involves the identification and detection of terrorist cells, explosive devices, major bombs, and other major smugglers. This class contains approximately 10 different commercial vehicles, each purposely set up and exposing attendees to different scenarios and concealment methods, just as the officers will encounter them in the field. The class contains over 150 different types of concealment methods commonly utilized by major smugglers and terrorist organizations. It provides officers with legal non-intrusive detection methods. The class has well over 33,000 lbs of simulated contraband and enough simulated explosives to take down commercial airliners and level America's largest buildings. Officers are taught to be alert for possible criminal activity while conducting everyday patrol responsibilities. Emphasis is placed on road officers to conduct high volume, legal, professional, courteous, enforcement contacts. The goal of this course is to help law enforcement detect/deter/interrupt the potential delivery of weapons of mass destruction via over the road vehicles.

Natural and man-made disasters can create hazardous situations for large animals. Not only can this result in devastating outcomes for the animals involved, but lay rescuers and owners of the animal may severely and possibly fatally injure themselves during untrained rescue attempts. Thus, there exists a need to ensure that trained, capable individuals and groups are available during emergency situations involving large animals to minimize risks of injury and death both for the rescuers and the animals. This is an Operations Level course targeted at first responders involved in large animal rescues, to include animal control officers, police officers, fire fighters, veterinarians, veterinary technicians, and non-government organizations, among others. Upon completion of the course, participants will be expected to pass a written test at 70%, as well as perform hands-on skills. As an operations level course, participants are expected to learn the material to a competency level of task performance with some supervision. At the completion of the course, participants will have been instructed to safely participate in a large animal rescue involving both low and high angle rescues using lifting systems, mechanical advantage systems, ropes, webbing, and the rescue glide. Additionally, participants will have a working knowledge of techniques, hazards, and special equipment required for mud, confined space, helicopter, trench, and water rescue. Responders must consult with the local Authority Having Jurisdiction (AHJ) before engaging in a rescue. This is a regional focus program.

following natural and man-made disasters, families and communities can be uprooted due to the conditions that have been created. The extreme conditions of many disasters can have a devastating effect on human and animal life, including family pets. In many situations, animals need to survive in environments with sparse food and little water. Through best management practices, animal shelter volunteers can shelter and provide proper care for these animals. This Awareness Level course is designed to prepare participants to assist in sheltering and caring for animals. These participants will be required to comply with State and Federal Emergency Management regulations. Through this course, participants will be instructed regarding the standard guidelines for emergency response and provided with a solid foundation for further training. This course will focus on awareness level volunteers job responsibilities within the set up, maintenance, and tear down of emergency shelters, while respecting the importance of cleaning and disinfecting the shelters resources to prevent the transfer of disease. This course is designed for successful completers to participate in animal emergency shelters across the United States. The skills needed to be successful will be provided in the form of best management practices to better prepare animal shelter volunteers for the situations that occur in the shelter. To train animal shelter volunteers, this one-day course will be taught throughout the country to local, regional, state, and national responders. For participants to successfully complete this course, each is expected to achieve a 70% on the written exam and a satisfactory completion of the mock shelter exercise. Course Review and Approval Status Flow History

Following the NFPA Standard 1005 and recommendations of NFPA 1405, this course was developed especially for the professional fire fighter. It is designed to orient the student to the maritime industry, covering such topics as ships organization and construction, in-depth strategy and tactics for various ship configurations, similarities and differences between ship and structural firefighting. The student will learn of the special considerations, hazards, unique protection/detection systems, strategy and tactics, legal issues and command procedures that encompasses working in marinas, ports and different classes of vessels that can be encountered. The class is 50% classroom and 50% practical. The students will train in scenarios with live fire and will learn how to operate in a full scale ICS environment using a variety of outside resources from the public and private sectors. This course can also be provided at other appropriate Fire Training Facilities with live fire capability. The Resolve Maritime Academy course incorporates:

1. A dedicated 140' training vessel, 4 decks high, with over 18 compartments with ladder ways, watertight doors, escape hatches, gang way, international shore connection and other marine equipment.
2. Dock facility that will allow pumper/equipment placement.
3. The ability to run 2 days of live fire training on the training vessel. Fires that will be attacked will include galley fires, engine room fires, high pressure flange/piping fires, cargo fires, berthing fires, flammable liquid fires and helicopter fires.
4. Cabins within the training vessel for search and rescue in real fire scenarios.
5. Port tour showing petroleum off loading/storage facilities/vessels, intermodal facilities/vessels and cruise ship facilities/vessels; showing the fire protection equipment, specialized equipment/processes, hazards, strategy/tactical implications of a working port and how it applies to the land based firefighter.
6. Detailed salvage and firefighting techniques and how they work together, including dewatering techniques.
7. Focus on an 'all hazards' approach to Shipboard Emergency Response. Many shipboard related emergencies may have an 'Off Ship Impact' to the local community, and dependent upon local protocols, would necessitate a fire department response.
8. Includes working with CO2 and Hi-Fog systems
9. Offers interaction with other maritime firefighting training classes being conducted simultaneously for real life, real time tactics and decision making.
10. Includes bulk foam operations.

By creating a SWAT typing system, commanders at an incident can quickly determine what resources are available to them. The Type III SWAT Operations Course complies with and supports the National Incident Management System (NIMS) typing system by offering tiered levels of training. This course addresses several components of the Command Management, Preparedness, Resource Management and Supporting Technologies necessary for SWAT response. This course thoroughly covers:

- SWAT Concepts
- Equipment Selection (Specific to Type III SWAT Teams)
- Firearms Selection
- Body Armor and National Institute of Justice (NIJ) Rating System
- Cover and Concealment in Urban Environments
- Tactical Intelligence Center (TIC) / Tactical Operations Center (TOC) Operations
- Introduction to Terrorism
- CBRNE Agents and Federal Laws addressing WMD
- PPE Selection and Operations Considerations (Familiarization)
- Shooting Platforms and the Sympathetic Nervous System Response to Threats
- Scouting, Intelligence and Pre-planning (Familiarization)
- Approaches and Movement Outside of Target Structures
- Mechanical and Ballistic Breaching Techniques
- Occupancy Control
- Alternate Methods of Communication
- Tactical Angles
- Dynamic Clearing Techniques
- Slow and Deliberate Clearing Techniques
- Citizen and Team Member Recoveries
- Improvised Explosive Devices
- Passenger Vehicle Assaults
- Hostage Rescue Theory

At the conclusion of this course, students will have the skills, abilities and knowledge to effectively serve as a team member performing tactical missions that would be commonly conducted by a Type III SWAT team. All of the skills taught in this course are extremely perishable and will require the participants to continue with on-going training. A Type III SWAT team is one which is designated to handle high risk situations requiring specialized weapons with limited resources and capabilities. Type III SWAT teams should be capable of working in CBRNE environments absent of vapors.

Immediate Action Team (IAT) Rapid Law Enforcement Tactical Response to Violence and Terrorism in the School Setting

ID-004-RESP

Sponsoring State: ID

Course Level: Performance

Delivery Type(s): Residential

Duration (in Hours): 5.0

Duration (in Days):

Course Description:

Protecting our nation's youth is one of the most critical tasks facing our schools and responders. Today, responders not only need to be concerned and prepared for school shootings initiated by students and others, but also the threats facing our schools by terrorist organizations. Unlike dams, power plants, military bases, stadiums and other potential terrorist targets, schools are in nearly every city in America and are targets even for persons with little or no training. On any given day during the school year, these 90,000 vulnerable structures hold approximately 46.5 million of our nation's youth. The Immediate Action Team (IAT) Rapid Law Enforcement Tactical Response to Violence and Terrorism in the School Setting complies with and supports the National Incident Management System (NIMS) by addressing several components of the Command Management, Preparedness, Resource Management and Supporting Technologies necessary during response phases of an incident. More specifically, this course prepares responders for a multi-jurisdictional, multi-discipline, emergency mass casualty event. The course prepares responders to launch a rapid tactical response and overcome the impressive list of challenges ranging from logistical to emotional issues. The tactics, techniques and procedures (TTPs) presented in this course support and compliment the TTPs presented in the DHS pre-approved SWAT Team Typing courses (ID-001-RESP, ID-002-RESP, and ID-003-RESP) allowing for a seamless transition from patrol and first responder response to a scene that is commanded by a Type I, II, or III SWAT Team. This course thoroughly covers: The Active Shooter, Introduction to Terrorism, School Shootings, Columbine, Virginia Tech, The Siege at Beslan, Improvised Explosive Devices, Basic Breaching and Establishing an Immediate Action Team. At the conclusion of this course, students will have the basic skills, abilities and knowledge to effectively serve as a team member performing tactical operations to locate and neutralize threats posed by an active shooter in a school.

Course Description:

By creating a SWAT typing system, commanders at an incident can quickly determine what resources are available to them. The Basic Concepts and Tactics SWAT complies with and supports the National Incident Management System (NIMS) typing system by offering tiered levels of training. This course addresses several components of the Command Management, Preparedness, Resource Management and Supporting Technologies necessary for basic SWAT response. This is the first course in a series that builds toward more complex, sophisticated concepts. More specifically, this course provides a solid foundation for the preparation of students intending to take the Advanced SWAT Operations Type I, II or III courses that are pre-approved by DHS (ID-001-RESP, ID-002-RESP, ID-003-RESP). Graduates of this course will learn the basic concepts and tactics presented in the full Typing system courses, allowing them to integrate on a basic level with graduates of the advanced courses. This course thoroughly covers:

- Physical Training
- SWAT Concepts
- Equipment Selection
- Cover and Concealment
- Introduction to Terrorism
- Tactical Mindset
- Tactical Angles
- Occupancy Control
- Tactical Mechanical and Ballistic Breaching
- Approaches and Movements Outside of the Target Structure
- Dynamic Clearing Techniques
- Slow and Deliberate Clearing Techniques
- Improvised Explosive Devices
- Passenger Vehicle Assaults

At the conclusion of this course, students will have the basic skills, abilities and knowledge to effectively serve as a team member performing tactical missions at the basic level. All of the skills taught in this course are extremely perishable and will require the participants to continue with on-going training. A basic SWAT team is a part-time team designated to handle high risk situations requiring specialized weapons or extraordinary special operations in either a rural or urban environment. The team will understand what is required to work in a CBRNE environment absent of vapors.

The goal of this 3-day course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response that has resulted in the need for a shallow, non-intersecting trench rescue. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This is class 4 of 9 in the progression towards membership on a statewide Type II Collapse Search and Rescue Team. Students are trained for trench rescue in spaces consistent with NFPA 1670, 2004 Edition. Teams are prepared for short-term incidents of a trench or excavation nature utilizing appropriate equipment in the team's cache. This course builds additional capabilities above and beyond those that currently exist meeting the need identified by the Illinois Terrorism Task Force (ITTF) Training Objective 4, 'Training Technician Teams to Deal with B-NICE (Biological, Nuclear, Incendiary, Chemical, and Explosive) Threats.' Students must also be in compliance with 29 CFR 1910.134. During this program the student shall work as a member of a team in every critical position of every task to accomplish the following terminal objectives: Identify the need for rescuer safety at scene evolutions involving trench and excavation emergencies; Identify state and federal regulations that pertain to trench and excavation rescue; Demonstrate use of specialized equipment for atmospheric monitoring, emergency shoring systems, and victim excavation; Demonstrate use of rescuer constructed retrieval systems. Demonstrate procedures to make safe trench entry; Demonstrate making the rescue area safe; Implement procedures for assessing the mechanism of entrapment; Demonstrate methods of releasing a victim.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Statewide WMD Response: Technical Rescue Awareness, Statewide WMD Response: Rope Rescue Operations, Statewide WMD Response: Hazardous Materials Operations, and Statewide WMD Response Confined Space Rescue Operations.

The goal of this 10-day course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response that has resulted in the need for a high-angle rescue. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This is class 5 of 9 in the progression towards membership on a statewide Type II Collapse Search and Rescue Team. Students are trained for rope rescue in situations consistent with NFPA 1670, 2004 Edition, 6.3.2 and 6.4. Teams are prepared for long-term incidents of a high-angle rescue nature utilizing appropriate equipment in the team's cache. This course builds additional capabilities above and beyond those that currently exist meeting the need identified by the Illinois Terrorism Task Force (ITTF) Training Objective 4, 'Training Technician Teams to Deal with B-NICE (Biological, Nuclear, Incendiary, Chemical, and Explosive) Threats.' Students must also be in compliance with 29 CFR 1910.134. During this program the student shall work as a member of a team in every critical position of every task to accomplish the following terminal objectives: Demonstrate selection, construction, and use of anchors for rescue loads; demonstrate rappelling, conducting a pick-off, line transfers, ascending rope, lowering and raising litter baskets, and operating high lines. Direct scenarios of rope rescue operations. Demonstrate safe operation at a night operation. Demonstrate conducting a safety systems check; Demonstrate tying and use of a variety of applicable knots and hitches; Demonstrate constructing an English Reeves system; Participate in the retrieval of a victim using an English Reeves system; Demonstrate use of a Munter Hitch belay to stop an object weighing a minimum of 150 pounds; Demonstrate belaying a rescuer; Demonstrate descending a fixed rope using a brake bar rack; Demonstrate clearing a jammed brake bar rack; Direct a ledge rescue; Complete a line transfer of a victim, package a victim; Participate in a comprehensive evolution involving a variety of the above objectives. This is a program designed to address both knowledge acquisition and the practice to proficiency approaches to learning. In the classroom the students are challenged to meet a variety of academic goals by learning factual information, new ideas and concepts as related to rope rescue. In the field the students are challenged to integrate their classroom knowledge with hands-on experience on the rope rescue simulators. The students are provided with the opportunity to train in a realistic setting in an effort to internalize the skills necessary to become and maintain a higher standard of competence associated with first responders.

The goal of this 5-day course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response that has resulted in the need for a low-angle rescue. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This is class 2 of 9 in the progression towards membership on a statewide Type II Collapse Search and Rescue Team. Students are trained for rope rescue in situations consistent with NFPA 1670, 2004 Edition, 6.3.1. Teams are prepared for short-term incidents of a low-angle rescue nature utilizing appropriate equipment in the team's cache. This course builds additional capabilities above and beyond those that currently exist meeting the need identified by the Illinois Terrorism Task Force (ITTF) Training Objective 4, 'Training Technician Teams to Deal with B-NICE (Biological, Nuclear, Incendiary, Chemical, and Explosive) Threats.' During this program the student shall work as a member of a team in every critical position of every task to accomplish the following terminal objectives: Identify safety rules and procedures to be followed during a rope rescue; Identify the various types of rope, knots, hitches, personal protective equipment, hardware, and all other accessories essential to competent rope rescue operations; Identify the limitations, care, construction, classifications, and applications of the different life safety ropes; Demonstrate construction of mechanical advantage, belay, safety, anchor, and lowering systems; Demonstrate operation of mechanical advantage, belay, safety, anchor, and lowering systems; Demonstrate patient care, packaging, and movement; Calculate the theoretical mechanical advantage of a given situation; Perform a descent; Ascend a fixed rope; Bridle a litter basket. This is a program designed to address both knowledge acquisition and the practice to proficiency approaches to learning. In the classroom the students are challenged to meet a variety of academic goals by learning factual information, new ideas and concepts as related to rope rescue. In the field the students are challenged to integrate their classroom knowledge with hands-on experience on the rope rescue simulators. The students are provided with the opportunity to train in a realistic setting in an effort to internalize the skills necessary to become and maintain a higher standard of competence associated with first responders. Simulated rescue evolutions involving various rescue problems are conducted. Written and practical skill testing is conducted at the completion of the course.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Statewide WMD Response: Technical Rescue Awareness and Statewide WMD Response: Hazardous Materials Operations.

Mission Area(s):

- Respond

Discipline(s):

- Fire Service

POC Work Email: gene.felchner@illinois.gov

Course Active?: Yes

Sponsoring State: IL**Course Level:** Performance**Delivery Type(s):** Residential**Duration (in Hours):** 40.0**Duration (in Days):****Course Description:**

The goal of this 40-hour course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response that has resulted in the exposure to a hazardous material as defined in NFPA 471, Chapter 3, 3.3.20, 2002 Edition. Both Statewide WMD Response: Technician 'A' and 'B' are required to satisfy the technician level of NFPA 472, 2002 Edition. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Students are trained to use the 5-step (Identify, Notify, Isolate, Mitigate, and Terminate) model for Hazardous Materials response. This course builds additional capabilities above and beyond those that currently exist meeting the need identified by the Illinois Terrorism Task Force (ITTF) Training Objective 4. 'Training Technician Teams to Deal With B-NICE (Biological, Nuclear, Incendiary, Chemical, and Explosive) Threats.' Students must also be in compliance with 29 CFR 1910.134. Students will show an integrated understanding of Basic Confined Space Monitoring: Specific known gas monitoring, Alpha, Beta and Gamma detection and Vapor-protective CPC: Flash Fire Vapor Protective CPC and Liquid Splash Protective CPC. Teams demonstrate understanding of Printed and Electronic Plume Monitoring: Map Overlays and have integrated understanding of Diking and Damming. During this program the student will identify and demonstrate the basic skills needed to evaluate and work defensively at an incident involving the release of hazardous materials and/or CBRNE agents; Identify basic hazard and risk-assessment techniques; Demonstrate selecting and using proper personal protective equipment provided to the first responder operational level; Demonstrate performing basic control, containment and/or confinement operations within the capabilities of the resources and personal protective equipment available; Demonstrate the understanding of relevant standard operating guidelines and termination procedures; Explain the state plan for statewide response to WMD events; Apply their role as a member of a team within NIMS in the CBRNE Event; Demonstrate proficiency for every task and position for each psychomotor objective; Describe the integration of their specific tasks to the successful implementation of a statewide response. The student will demonstrate the understanding of Basic confined space monitoring and specific known gas monitoring; Identify known industrial chemicals and unknown industrial chemicals; Demonstrate an understanding of Vapor-protective CPC; Flash Fire Vapor-protective CPC; and Liquid Splash-protective CPC; Demonstrate an understanding of printed and electronic; plume air modeling; Map overlay. Demonstrate an understanding of the importance of gloves, and other specialized equipment based on local risk assessment; heat sensing capability; and light amplification capability; Demonstrate an understanding of absorption, liquid leak intervention, neutralization plugging, patching and vapor leaking intervention. Student will also be able to utilize in-suit, wireless voice, and wireless data.

Sponsoring State: IL**Course Level:** Performance**Delivery Type(s):** Residential**Duration (in Hours):** 5.0**Duration (in Days):****Course Description:**

The goal of this 5-day course is to prepare local responders to operate as a local member of a regional team within the NIMS at a CBRNE (Chemical, Biological, Radiological, Nuclear, or Explosive) WMD Event requiring statewide response that has resulted in the need for a non-permit required confined space rescue. Goal 1 in the Illinois Homeland Security Strategy is to create / enhance a Coordinated and Integrated Public Safety Community in order to provide for integrated regional response and statewide mutual aid, which are the cornerstones of our state WMD response plan. Delivering standardized training in a coordinated way is one of the highest priorities in implementing our state plan and we have developed a written strategic plan for training that includes nine objectives. This training plan also addresses the capabilities necessary for first responders in Illinois to meet the state, regional and local tasks provided in the Universal Task List. This is class 3 of 9 in the progression towards membership on a statewide Type II Collapse Search and Rescue Team. Students are trained for confined space rescue in spaces consistent with NFPA 1670, 2004 Edition, 7.3.1(6). Pre-requisites for this class are Statewide WMD Response: Technical Rescue Awareness, Statewide WMD Response: Hazardous Materials Operations, and Statewide WMD Response: Rope Rescue Operations. Teams are prepared for short-term incidents of a confined space nature utilizing appropriate equipment in the team's cache. This course builds additional capabilities above and beyond those that currently exist meeting the need identified by the Illinois Terrorism Task Force (ITTF) Training Objective 4, 'Training Technician Teams to Deal With B-NICE (Biological, Nuclear, Incendiary, Chemical, and Explosive) Threats.' Students must also be in compliance with 29 CFR 1910.134. During this program the student shall work as a member of a team in every critical position of every task to accomplish the following terminal objectives: Define a confined space; Describe the hazards of a confined space; Identify federal and state regulations for confined spaces; Identify the parts of an entry permit; Identify the employee training and the training and duties of an authorized attendant and the off site rescue person. Identify the need for rescuer safety, scene management, and patient care, packaging and movement. Identify indications for entering a confined space; Identify indications for use of specialized equipment for atmospheric monitoring; Demonstrate proper and safe use of commercial and rescuer-constructed entry and retrieval systems, This is a program designed to address both knowledge acquisition and the practice to proficiency approaches to learning. In the classroom the students are challenged to meet a variety of academic goals by learning factual information, new ideas and concepts as related to confined space rescue. In the field the students are challenged to integrate their classroom knowledge with hands-on experience on the confined space simulators. The students are provided with the opportunity to train in a realistic setting in an effort to internalize the skills necessary to become and maintain a higher standard of competence associated with first responders. Simulated rescue evolutions involving various rescue problems are conducted. Written and practical skill testing are conducted at the completion of the course. This course meets the operations level of NFPA 1670, 2004 Edition, Chapter 7 Confined Space Search and Rescue and NFPA 1006, Chapter 9 Confined Space Rescue. It additionally meets the requirements of 29 CFR 1910.146, 29 CFR 1910.147, and the Illinois Office of the State Fire Marshall Confined Space Rescue Operations requirements. This course is approved by the Illinois Department of Public Health for 40 Emergency Medical Services Continuing Education Hours. Course POC: Bill Renaker wrenaker@fsi.uiuc.edu 217.333.8927

Sponsoring State: KS**Course Level:** Performance**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 80.0**Duration (in Days):****Course Description:**

This is an 80 hour course based on the course that was originally developed by the USAR working Group for FEMA. This course is the standard of training for the Urban Search and Rescue Teams. It has been delivered across the United States to Federal Urban Search and Rescue Teams. Minor changes to the FEMA course have been made to adapt the course to fit Kansas needs, Kansas capabilities and Kansas Fire and Rescue Training Institute resources. The intent of the course is to provide a means for departments to develop and improve their skills in the area of structural collapse. Several Kansas Fire departments are forming mutual aid agreements which include structural collapse training and resources. Heavy rescue capabilities are limited in the state and by offering this course it will increase the number of trained responders in the event of a structural collapse from terrorism or natural causes. Students are expected to practice and demonstrate the learned skills to the instructors as a part of the course. This is an equipment and logistics intensive course. In past years, it has been determined that, in the Midwest, additional training needs to be undertaken for types of structures that don't exist other places. For example, large grain elevators and other agricultural structures. There are also hazards associated with these types of agricultural structures that are not associated with large building collapse. It takes a number of trained instructors and specialized equipment. This course will address an area that Kansas responders have identified as a need and the course will have a positive impact on the capabilities of the state in the area of heavy rescue.

Material presented in this course will allow members of the land-based response community to develop a working understanding of how best to accomplish their tasking and efforts when responding to a medical emergency in the maritime domain both from the shoreside and when interfacing with vessels that may be subject to either U.S. or international regulations. Elements of the program will address how to best combine efforts to integrate shore side security and medical response efforts while interfacing with a waterborne security and response program that could include maritime security, fire, hazmat, CBRNE, oil spills, mass evacuation and mass casualty operations in a maritime all hazards environment. Additional elements include how to perform such functions with Federal agency assistance under the National Response Plan, Customs and Border Protection (CBP), and U.S. Coast Guard requirements. Portions of the program will consider considerations of first responder security and safety requirements including how to combine all efforts to comply with security requirements of the Maritime Transportation Security Act (MTSA), the International Ship and Port Facility Security (ISPS) code the Security and Accountability For Every Port (SAFE) Act of 2006 for various regulated entities.

This four day tactical Interdiction course prepares first responder law enforcement officers to prevent, respond to and mitigate terrorist attacks in mass transit environments to include passenger trains, light rail, mono rail elevated rails, busses, subways, and their associated platforms. Building on a foundation of examined terrorist tactics: officers will learn to recognize indications and warnings that a mass transit terrorist attack is imminent and how to apply real time tactical interdiction techniques. Officers will also learn how to tactically search for active threats and manage very large crowds during an attack with an emphasis on continued scene safety. A key element of this course is the extensive use of realistic scenario--based field exercises in which participants will execute tactical operation with the use of role players and realistic WMD training aids.

At the completion of this course, the individual first responder will have developed the knowledge and reason why to successfully incorporate encounters with companion animals into their preparedness and planning stages of emergencies and disasters having learned an awareness and appreciation for the role that animals play in these situations as hazards, and their direct impact on occupational and public health and safety. The first responder will also be made aware of additional animal related local, state and federal resources to call upon in the event that their local resources become overwhelmed. The individual first responder will have developed the techniques to be able to effectively restrain, handle and evacuate dogs and cats encountered in emergency situations. The individual first responder will have developed the basic patient assessment and first aid skills to triage and assist companion animals on-scene of an emergency or disaster situation until veterinary care can be provided. They will also be familiarized with the contents of the BART SA kit. At the completion, the individual first responder will be capable of properly performing CPR on dogs and cats.

Course Objectives:

At the end of this course, participants will be able to:

Develop the knowledge and reason why to successfully incorporate encounters with companion animals into their preparedness and planning stages of emergencies and disasters having learned an awareness and appreciation for the role that animals play in these situations as hazards, and their direct impact on occupational and public health and safety.

The course is 12 hours in length. 4 hours of didactic session, 8 hours of performance session. The purpose of this course is to teach a new integrated practice to first responders in a hostile event situation where there are viable victims to reduce morbidity and mortality. The 3 Echo response is an integrated practice for first responders that moves beyond the separation of law enforcement and rescue/medical personnel during active shooter or post blast responses, the integration is completed as soon as possible during an event response with the goal of providing the ability to rescue viable victims while the response to the hostile event is ongoing. The course has two parts: a didactic session and a performance session. The didactic session starts with a foundation for the need of integrated response to a hostile event and then moves into the introduction of the 3 Echo response, including an in depth discussion of the operational phases, job aids, and resources needed to conduct a 3 Echo response. The didactic session is an interactive discussion session where the theoretical foundation for the response is established and the operational application is introduced. The performance session focuses on training the three directives: Enter, Evaluate, and Evacuation, and includes application of the operational phases, job aids, and resources discussed during the didactic session in a small group, hands on learning environment. The performance sessions allow for the opportunity to develop proficiency with the three directive response and to work through any conceptual issues and the thirteen operations. The performance session also includes simulated responses to hostile events that focus on the immediate integration of first responders and movement through the 3 Echo phases.

The basis of this training program is to provide a set of standardized training objectives and standardized recommendations for establishing a county or regional Decon Task Force. This training satisfies OSHA training mandates under 29 CFR 1910.120 (HAZWOPER) regulations and standard. At the awareness level, this program describes the process of decontamination and how a decon task force can be established. The program can be incorporated into existing fire, EMS and law enforcement training academies and offered as a stand alone class for all first responders. On the response and recovery level this program is intended to impart advanced knowledge and hands-on training to individual departments and or groups that may be created or called upon to perform decontamination as part of a designated task force. This training will provide life saving measures to individuals and quality of life to the general population.

The main purpose of this four (4) hour program is to provide the first due EMS responders and follow-on units with a standardized method to recognize and began initial actions at the large scale incident, and to provide the foundation needed to effectively, efficiently and safely manage the incident. This course is appropriate for all levels of responders, from the newest member to the seasoned veteran. It provides the first steps to ensure that these incidents are mitigated and settled as quickly as possible, with the most lives saved, and with the economical use of resources. The program consists of six (6) substantive sections, and include training on recognition and evaluation of large scale incidents, the proper use of the S.T.A.R.T. System of triage and New Jersey's Disaster Triage Tags, scene size-up and incident communications, and the roles and responsibilities of EMS providers. Course development was funded through the Focus Area G on the CDC Bioterrorism Cooperative Agreement with New Jersey (through the Department of Health and Senior Services) and the program has been approved for 4.0 (NJ) EMT CEUs.

NFPA Training 1405: Guide for Land-Based Fire Fighters who respond to Marine Vessel Fires. Scope: This guide identifies the elements of a comprehensive marine fire-fighting response program including, but not limited to, vessel familiarization, training considerations, pre-fire planning, and special hazards that enable land-based fire fighters to extinguish vessel fires safely and efficiently. In general, the practices recommended in this publication apply to vessels that call at United States ports or that are signatory to the Safety of Life at Sea (SOLAS) agreement. 1.1.2 This document does not consider offshore terminals or vessels on the high sea. NFPA Training Standards 1005: Standard for Professional Qualifications for Marine Fire Fighting for Land-Based Fire Fighters. Scope: This standard identifies the minimum job performance requirements (JPRs) for land-based fire fighters responsible for fire-fighting operations aboard commercial/military vessels over 50 ft involved in fire that call at North American ports or that are signatory to the International Safety of Life at Sea (SOLAS) agreement.

The Structural Collapse Operations, Level I course is a five-day operations course that provides public safety students and organizations within the State of New Jersey with the operational knowledge, skills and abilities to perform basic search and rescue of transportation infrastructure emergencies, structural collapse or CBRNE incidents. A heavy focus will be placed upon rescuer safety, risk assessment, structural assessment and an overview of basic search techniques. This course will also provide instruction in the basic techniques of shoring, breaching concrete, cutting of metal and lifting, moving and rigging for rescue. Furthermore, the course will provide the student with the ability to be able to successfully perform basic search and rescue duties. Course delivery will consist of didactic instruction, participant activities, and hands-on oriented practical exercises. The course will have a portion of instructive classroom presentations and lectures, and a heavy emphasis of hands-on and task-oriented practical training in the field. In this course, students will learn rescue techniques to quickly and safely remove victims of structural collapse incidents. As they develop skills, the students participating in this course will enhance their ability to recognize hazards as well as conduct rescue operations so they can be effective within the public safety community and better facilitate New Jersey's structural collapse rescue program.

Sponsoring State: NJ**Course Level:** Performance**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):****Course Description:**

This course is designed to give security professionals an understanding of the Behavioral Analysis Continuum as it relates to the Security Awareness and Vigilance for everyone methodology for private Sector professionals. The instruction provides for an interactive learning environment and learning of threat mitigation strategies. They will be exposed to a procedure for detecting persons who are high-risk through simple non-custodial and non-threatening, consensual encounters with the public by law enforcement officers and security officers. Terrorist organizations such as Al-Qaeda have been known to prepare for attacks years in advance by doing repeated surveillance and practice runs. Through the use of a behavior assessment screening system such as the S.A.V.E. Methodology there is the advantage of detecting the terrorists when they are most vulnerable during attack planning and preparation. Identifying and confronting the terrorist during this phase provides the best opportunity to prevent attacks. Those individuals who successfully complete the course will be certified to screen members of the public using predetermined standards for ordinary characteristics and behavior.

Sponsoring State: NM**Delivery Type(s):** Residential**Course Level:** Performance**Duration (in Hours):** 3.0**Duration (in Days):****Course Description:**

This three day course trains supervisory, mid-level, and police and fire personnel in the application of the Incident Command System and the Unified Command concept. It is a multi-disciplinary approach to incident management that conforms with the National Incident Management System (NIMS). Reasonable travel and lodging expenses are provided through the DHS grant for participants. This program is a combination of classroom instruction and practical hands-on scenarios utilizing simulation exercises on a Model City Simulator, which offer the participant the opportunity to manage critical incidents utilizing an 'All Hazards Approach.' Participants will work through a four-phased 'Critical Incident, Event Activity Flow© that tracks Event Characteristics, Agency Response, and Desired Outcomes for any incident. The overall goal of the program is to provide participants with a foundational basis from which to better perform their duties at the time a critical incident occurs. Opportunities will be provided during class in which participants will actively review and discuss various case studies involving actual critical incidents from around the country.

The course utilizes the National Incident Management System (NIMS/ICS) and is designed to offer initial responders the opportunity to learn a simple, but extremely workable plan, to effectively manage 'All Hazard' critical incidents. After receiving classroom instruction on this method of managing incidents, which includes both Incident Command and Unified Command components, each class participant will be afforded the opportunity to apply the plan in a simulated street environment using a 90 square foot Model City. The overall goal of the program is to provide participants with a Simulator foundational basis from which to better perform their duties at the time a critical incident occurs. Opportunities will be provided during class in which participants will actively review and discuss various case studies involving actual critical incidents from around the country. Since it has been shown that emergency responders involved in a critical incident have a high probability of developing symptoms of critical incident stress, a section of the program is dedicated to its recognition, prevention and amelioration. This program will be delivered in twenty-four hours over three-days. The program makes extensive use of simulated exercises, problem solving scenarios and case studies. Sessions will be interactive and will not only examine the topics identified, but will encourage participants to think introspectively and project the newly learned information to handling future incidents. The program content focuses on a set of core ideas and concepts that will allow participants to relate them to actual work situations while enhancing decision-making skills. The uniqueness of this program is that within a training environment, students will participate in a positive and emotionally charged simulated experience utilizing our Model City Simulator to manage critical incidents of all types.

This course relates to the existing 'Simulation-based Training for Command Post Personnel' Tracking #050504-0. The Train the Trainer 'system' consists of three distinct program modules, a three day pilot course, a ten day Instructor Development (specific to Unified Command Post course) and a series of three day mentoring sessions for the new instructors initial teaching assignment of the approved delivery 050504-04. The complex of the final delivery requires this 16 day commitment on the part of prospective instructors. The program's goal is: 'To provide participants with the fundamental skills and knowledge to improve the performance of their future students who will be managing critical incidents.' This course is a combination of classroom instruction and hands-on. The exercises are simulations of exercises using the Model City Simulator real-life scenarios. Using the Model City, students learn to instruct the implementation of an 'All Hazards Approach' to manage critical incidents. They will learn to teach the five-phased 'Critical Incident, Event Activity Flow©' to track the Event Characteristics, Agency Response, and the Desired Outcomes of an incident. Using the National Incident Management System (NIMS) and the Incident Command System (ICS) structures, students build an effective 'Decision Making Team' to bring about a successful resolution of the simulated exercise. The students will learn to conduct exercises in a number of Modules that provide students with the opportunity to put into action the ICS model and implement the Unified Command concepts to establish an operational command post and manage a simulated critical incident. To bring the experience to life, on-camera press interviews are conducted, press releases are prepared and the command staff will provide briefings to government officials. Participants will learn to deliver to senior-level command personnel from Police, Fire, and EMS disciplines, as well as key decision-makers from other units of government and the private sector. Using the Unified Command approach, they will provide the necessary preparation to respond to and evaluate their community's readiness for major incidents. In addition, using the ICS Model, Pre-Event Planning will be developed and practiced

At the conclusion of this course, participants will gain the skills that they need to identify, detect, disrupt and prevent a potential terrorist attack orchestrated by and/or involving an individual who is attempting to directly deliver an improvised explosive device into or onto a "target-rich" environment. This instruction will elevate the participant's awareness regarding possible targets within their geographic area of employment for the purpose of identifying or disrupting hostile surveillance against the individual, the facility or the event, as well as train participants to interact effectively with individuals within a "target-rich" environment to ensure the greatest level of safety and security for all persons involved. The participants will be better equipped to elicit information within these settings, as well as adhere to established policies and procedures related to the identification and dissemination of information within the organization, as well as with local, state and federal law enforcement agencies, when appropriate. Participants will be able to independently establish safe, efficient and legally-defensible gross screening checkpoints, and demonstrate the ability to deploy, utilize and maintain explosive trace detection devices. develop plans for training and communicating with these resources, as well as establish protocols to validate information they provide and attempt to supplement the information being obtained by establishing asset networks. Participants will also develop plans for the effective, efficient and tactical deployment of personnel to perform surveillance and counter-surveillance operations while also elevating their awareness regarding possible targets within the region for the purpose of identifying or disrupting hostile surveillance against the individual, the facility or the event.

Course Objectives:

At the end of this course, participants will be able to:

- Independently establish safe, efficient and legally-defensible gross screening checkpoints, and demonstrate the ability to deploy, utilize and maintain explosive trace detection devices.
- Develop plans for training and communicating with these resources, as well as establish protocols to validate information they provide and attempt to supplement the information being obtained by establishing asset networks.

Recognition and Initial Response to Potential Terrorist Attacks: Advanced is intended to provide the law enforcement, counter-terrorism, and intelligence communities with an opportunity to develop observational skills that, when coupled with appropriate and timely information sharing, could prevent a terrorist attack on a domestic target. This three-day instructor-led course is designed at the operations level and is scenario-based, intending to actively engage participants in interactive discussions and activities. Participants will explore the various phases of a terrorist attack using realistic scenario-based discussions and activities. The activities are organized by module and "step." In these activities, participants will assume the roles of terrorist operatives who are planning an attack on a domestic scenario target. Then, each group will report out on the plans it has developed. In this way, the groups will be facilitated in discussions that encompass three potential targets. The discussions aim to develop and improve participants' understanding of potential terrorist planning and other observable activities. Moreover, these discussions will enable the class to consider potential information sharing and other potential interdictory actions. Participants will be able to compare and contrast scenario-based discussion with real-life case studies. An essential element of the course is the discussion and reinforcement of the need for timely and appropriate information sharing with government and law enforcement agencies through field intelligence officers (or similar positions), Joint Terrorism Task Forces, fusion centers, and related systems.

The HAZMAT Branch Director/HAZMAT Safety Officer course will cover the competencies in NFPA 472-2008 chapter 10, Competencies for Hazardous Materials Officers and chapter 11, Competencies for Hazardous Materials Safety Officers. The course will provide students with the necessary skills, knowledge and tools to perform both the HAZMAT Branch Director and HAZMAT Branch Safety Officer functions within the incident command system at a hazardous materials incident. The course will be primarily scenario based with approximately 70% group problem solving, tabletop exercises and discussion of scenarios and 30% lecture. Course material to accomplish the following goals will be developed. 1. Properly assess the problem and size up the scene at a hazmat emergency 2. Evaluate and plan response operations with appropriate safety methods with the capabilities and competencies of available resources. 3. Implement safety procedures based upon objectives, strategies, and tactics and follow the local emergency response plan and applicable standard operating guidelines. 4. Continually evaluate conditions and the progress of operations and adjust accordingly until safety objectives are met 5. Safely and appropriately terminate the incident

Description of course: Pennsylvania's Water Rescue Program is designed to train personnel in the most current techniques of boating and water safety. The goals of the program are: -Familiarize the rescuer with the proper procedures used in basic water safety and safe boat handling. -Have the rescuer demonstrate a proficiency in water rescue relative to individual capabilities. -Provide the rescuer with competency in dealing with on-the-water emergencies. The program was developed for training fire and rescue personnel. However through appropriate adaptation, the course can be used in the water rescue training of police departments, park service personnel, or for members of any boating and water safety organization. Depending on the need or geographic location, only one or a combination of courses may be necessary to fulfill your agency's training requirements. Students must be at least 18 years of age to participate. All courses require a minimum of two instructors per recommended class size of 12 to 16 students. Water Rescue and Emergency Response The Water Rescue and Emergency Response course covers the planning for water emergencies, dynamics of water movement, medical conditions, personal safety, and fundamental rescue techniques (self and shore based rescue). This course is a prerequisite for all other training programs. The course provides students with classroom and hands on training. Students must be prepared to engage in strenuous activities in extreme weather and water conditions. If a student has a known medical condition that could foreseeably jeopardize his/her safety during participation or be aggravated by participation, the student should not participate. All rescues contained in this program are based on simple and effective techniques. A U.S. Coast guard personal flotation device (PFD), water rescue helmet and appropriate clothing for water and weather conditions must be worn by the student at all times when practicing or attempting any of the

Description of Course: Pennsylvania's Water Rescue Program is designed to train personnel in the most current techniques of boating and water safety. The goals of the program Are: - Familiarize the rescuer with the proper procedures used in basic water safety and safe boat handling. -Have the rescuer demonstrate a proficiency in water rescue relative to individual capabilities. -Provide the rescuer with competency in dealing with on-the-water emergencies. The program was developed for training fire and rescue personnel. However through appropriate adaptation, the course can be used in the water rescue training of police departments, park service personnel, or for members of any boating and water safety organization. Depending on the need or geographic location, only one or a combination of courses may be necessary to fulfill your agency's training requirements. Students must be at least 18 years of age to participate. All courses require a minimum of two instructors per recommended class size of 12 to 16 students

Emergency Boat Operations and Rescue This is a must have course for any rescue unit involved with on-the-water operations. Emergency Boat Operations and Rescue course trains rescue personnel to select, outfit, operate, and rescue individuals utilizing boats as a rescue platform. Course components include classroom and practical hands-on training in: boat selection, rescue craft outfitting, boat handling, moving-water tactics, emergency boat procedures, and boat rescue techniques. Meets or exceeds NFPA 1670 Technician-level guidelines. Students must be prepared to engage in strenuous activities in extreme weather and water conditions. If a student has a known medical condition that could foreseeably jeopardize his/her safety during participation or be aggravated by participation, the student should not participate. All rescues contained in this program are based on simple and effective techniques. A U.S. Coast guard personal flotation device (PFD), water rescue helmet and appropriate clothing for water and weather conditions must be worn by the student at all times when practicing or attempting any of the recommended practices.

Students must be at least 18 years of age to participate. All courses require a minimum of two instructors per recommended class size of 12 to 16 students. Advanced Line systems Rescue course trains rescue personnel in complex rescue systems that expose personnel to potentially life threatening hazards. These systems should only be used when lower risk options have been exhausted and when the team has the training, equipment, and skills to utilize these techniques. The systems taught in this course require personnel to: -Select the appropriate system or technique for the situation. -Establish and operate the system. -Affect the rescue or recovery. -Tear down the system. Classroom and practical hands-on training includes: static line systems rescues such as the movable control point (MCP), 3:1 mechanical advantage (also known as z-drag or z-rig), and zip line (tension diagonal). Tethered rescuer techniques using Type V rescue personal flotation devices (PFD) are also addressed. Students must demonstrate competency in the classroom and outdoor practical sessions. Students must be prepared to engage in strenuous activities in extreme weather and water conditions. If a student has a known medical condition that could foreseeably jeopardize his/her safety during participation or be aggravated by participation, the student should not participate. All rescues contained in this program are based on simple and effective techniques. This ERT program has an 8-hr awareness course; a 16 hour basic concepts course and a 24-hr Train the Trainer course. However, since in the state of TN we require that all persons accepted into the TtT course have already successfully completed the 16-hr BC course, the TtT course will be 24 hrs when class size dictates. Four hours will be used for review and the rest of the time will be used for teach-back. Information covered includes Understanding and Recognizing Terrorism; Tactical Considerations; C-BRNE Agents; and Incident Command with a NIMS reference. It should be noted that originally this course was developed for the Office of Domestic Preparedness by Community Research Associates. However, because the SAAT course replaced it we were told we had to go through this process again. The ERT program described here is more advanced than the current Standardized Awareness Program (SAAT) and we currently use the ERT program (16-hr basic concepts class) as a requirement in our HazMat certification process. We have always strived to exceed the nationally recognized standards of training which is why we are submitting this course for institutionalization as a core class.

This two-day/16 hour performance level course provides dynamic, hands-on, patrol-oriented basic tactical training designed to aid law enforcement in their ability to safely and effectively respond to and stop an active shooter. This course will empower the police officers that respond first at an active shooting incident to make immediate tactical decisions to stop the on-going violence and save lives. The course involves some classroom material highlighted by scripted force-on force scenarios utilizing the latest technology available for law enforcement training. The ultimate goal of the ALERRT team is to develop a replicable model training program to serve uniformed peace officers across the state.

Sponsoring State: TX**Delivery Type(s):** Residential**Course Level:** Performance**Duration (in Hours):****Duration (in Days):****Course Description:**

This course is provided by the Texas Engineering Extension Service (TEEX), a member of the Texas A&M University System, and mirrors the current Federal Emergency Management Agency (FEMA) 45 hour Medical Specialist curriculum. This course was initially developed by FEMA for responders associated with the twenty-eight FEMA National Urban Search & Rescue (US&R) Teams. Because FEMA does not sanction this course to non-FEMA responders, nor do they currently certify equivalent courses, TEEX modified the 45 hour FEMA Medical Specialist course to contain the same curriculum but added more hands-on training/exercises. As the lead agency for search and rescue under the Texas State Emergency Management Plan, Annex R - Urban Search & Rescue, TEEX must provide US&R training that meets the requirements of all local and regional responders within the state and ensure the training is standardized to ensure consistency during incidents of major significance. Delivery of this modified course ensures that all regional and state US&R teams will operate at the standards established by Texas Task Force 1. Due to the extensive field training conducted, specialized training facilities are required.

This awareness level course teaches emergency responders (primarily law enforcement) the basic knowledge needed to identify possible Person Borne and Vehicle Borne explosive situations and the skills to safely and effectively address the threat. In order to accomplish this task, the participants are first taught about the properties of explosives and how these properties are harnessed into a weapon. From this point, methodologies of terrorism are discussed and how the explosive devices are used to accomplish the terrorists' goals. Law enforcement defensive and offensive measures meant to contain and resolve the threat are also brought up. How state law and department policies apply in a terrorist response are examined. Participants are taken to the bomb range where they are able to see and handle live explosives as covered in class. A demonstration of the explosive properties is conducted which reinforces the weapon potential of high and low explosives. This includes the initiation of explosives ranging from a small letter bomb to a suicide vest to emphasize the requirement for distance and shielding when dealing with a PBIED threat. This course does not cover device render safe operations.

Course Objectives:

This program aims to provide fire service participants a safe and controlled environment in which to observe fire behavior from the incipient stage through its growth and decay. The training will also provide an opportunity to observe the characteristics, warning signs, and development of potential flashover conditions and will demonstrate survival techniques which can be employed to prevent firefighter injury and death. Terminal Objective Upon completing this program, the participant will be able to define flashover, recognize conditions leading up to flashover and be familiar with certain hose handling techniques which may delay flashover or reduce the effects of exposure to flashover conditions. The Target Audience is experienced firefighters, capable of working in a full structural PPE ensemble, who have responsibility for interior fire attack in their home jurisdiction. Prerequisites NFPA Firefighter Level 1, or VFA~A,B,C or VFA~ 1,2,3 or Fire Chief's signature certifying compliance with NFPA 1001 and 1403 standards and full compliance with VOHSA 1910.134 Respirator Protection Standard (as interpreted by VFST) Class Size 18 student maximum References NFPA 1001, Standard for Fire Fighter Professional Qualifications NFPA 1403, Standard on Live Fire Training Evolutions International Fire Service Training Association (IFSTA) Essentials of Firefighting, 4th Ed Vermont Fire Academy (VFA) Advanced Fire Behavior Training Lesson Plan Phoenix Training Systems Flashover Trailer Operations Manual.

The course is targeted to provide Operational Level training on Confined Space Rescue Operations in potential WMD contaminated environments. The Course adheres to NFPA 1670, NFPA 1006 and NFPA 472. Scope: This module provides first responders the knowledge, skills and abilities to manage a confined space rescue operation resulting from an intentional event involving Weapons of Mass Destruction (WMD). Upon successful completion of the course, the participant will be able to engage in confined space rescue operations at the 'operations' level while identifying and managing the hazards from potential weapons of mass destruction. Enabling Learning Objectives (ELO's) examples: Recognize potential targets of terrorism that are associated with confined spaces. Recognize a confined space. Identify the characteristics that define a permit required confined space. Identify the role of the fire service regarding confined spaces and confined space rescue. Identify the roles related to confined space entry such as the 'entrant', attendant, entry supervisor and their duties. Identify the components of a confined space entry permit. List the elements of a 'confined space rescue size up report' List the categories of hazards associated with a confined space and give an example of each. Identify the potential sources of stored energy and the policy for controlling them (lock out tag out) at a confined space emergency. Identify the potential types of atmospheric hazards that may be associated with a confined space and their characteristics. Identify the hazards detectable with a standard air monitor and the associated alarm set points. This course has been previously submitted and changes have been made.

This 3 1/2 day course is an entry level class for those that are just starting with computer investigations. If you are a criminal investigator, prosecutor, or support staff whose duties include the investigation and prosecution of high-technology crimes and the seizure of electronic evidence, this course could be of benefit to you. It teaches the fundamentals of computer operations, hardware, how to protect, preserve and image digital evidence. This class will introduce participants to the unique skills and methodologies necessary to assist in the investigation and prosecution of computer crime. The course includes hands-on instruction and discussion about such topics as evidence identification and extraction, hardware and software needed to do a seizure, high-tech legal issues, and more. The online component must be taken and each student must test out of it prior to being confirmed in the course. This course is designed for individuals who already possess a good understanding of computers and common software applications. In addition, many of the forensic computer applications used in the class are executed from the DOS command line, making knowledge of basic DOS commands essential.

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours):

Duration (in Days):

Course Description:

This Public Safety Rescue Swimmer training program has been formulated to meet the demands of Police, Fire and Rescue Squads whose areas of response include bodies of open water where users of these water bodies may find themselves in distress. Generally this course is aimed at responders facing possible difficult conditions of large waves, strong currents, poor visibility and remote access. As such, the contents of this course greatly exceed the standards set by most national agencies for technical water rescue response. It is assumed that these water rescue responders are part of a team (Department) effort and have available support in the form of equipment (boats, immersion suits, flotation devices and other), safety crew(s) on immediate standby in case of need by the primary rescuers, and that appropriate planning has been conducted in advance to minimize the possibility of rescuer injury and maximize the likelihood of successful rescue. We further assume that the Incident Command System is intact and operational

This course, Indicators of the Terrorist Attack Cycle, is intended to provide the emergency response community with an opportunity to develop awareness/basic/advanced observational skills that, when coupled with appropriate and timely information sharing, could prevent a terrorist attack on a domestic target. The two-day, instructor-led course, which is designed at the awareness level and is scenario-based, actively engages participants in interactive discussions and activities. Participants will explore the various phases of a terrorist attack using realistic scenario-based discussions and activities. Participants will be able to compare and contrast scenario-based discussion with real-life case studies. An essential element of the course is the discussion and reinforcement of the need for timely and appropriate information sharing with government and law enforcement agencies through field intelligence officers (or similar positions), the New York State Intelligence Center (NYSIC) Joint Terrorism Task Forces, and related systems.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

ICS 700, 100 and 200

Course Active?: Yes

Sponsoring State: NY**Course Level:** N/A**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 8.0**Duration (in Days):****Course Description:**

At the conclusion of this course, participants will gain the skills that they need to identify, detect, disrupt, and prevent a potential terrorist attack orchestrated by and or involving an individual who is a member of a terrorist organization. The course materials will train participants to identify anomalies in their operational environment that may be indicative to terrorist activities and perform legally justified stops of suspicious subjects. The participants will be able to conduct field interviews utilizing modern investigative techniques and tools such as body language, gestures, and facial expressions to assist in identifying whether a subject is lying or truthful. The participants will also develop an effective methodology to use during their daily deployments. During these deployments, the participant's elevated awareness regarding possible targets within the region will be heightened for the purpose of identifying or disrupting hostile surveillance, pre-operational terrorist activity, or post-incident activity against an individual, a facility, or event.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Course participants should have a foundation of basic terrorism awareness prior to attending this course. Participants should have attended a terrorism awareness course such as Counter Terrorism Awareness for Law Enforcement Professionals or a course similar in nature.

As a minimum: AMT.1 Providing participants with a framework for setting a course of informed, coordinated media outreach that employs a consistent message and establishes the Southeastern PA Task Force and the five counties as authoritative experts in emergency preparedness, response and recovery efforts across a broad spectrum of disciplines (such as: emergency response, fire fighting, hazardous materials, emergency medical services, public health, interoperable communications, human services, urban search and rescue, public information and warning, public safety and security, counter-terrorism) and operational issues. AMT.2 Providing a structure on how to: manage the Southeastern PA Task Force and county reputations; develop emergency public information; instill public confidence; utilize conflict resolution techniques; reduce controversy; manage messages and rumor control; deal with uncertainty; deal with public emotion and fear; understand the importance of providing choices and options to the public so they can choose their own courses of action; and enlist support of third-party experts. Specifically: AMT.2.1 How to build trust and credibility AMT.2.2 The need to provide timely and accurate information (speed vs. accuracy) AMT.2.3 Role and responsibilities of the spokesperson AMT.2.4 How to stay on message AMT.2.5 How to ace a 20-second sound bite AMT.2.6 How to ensure messages are consistent AMT.2.7 Dealing with difficult reporters AMT.2.8 Dealing with conflict and outage AMT.2.9 Opposing points of view from adversaries AMT.2.10 Public conflict and outrage AMT.2.11 Dealing with risks (real and perceived) AMT.2.12 How to anticipate the kinds of questions to be answered during an emergency AMT.2.13 Conducting and participating in multi-agency press conferences, where to hold the press conference AMT.2.14 When to use a press release vs. press statement AMT.2.15 Responding to errors, misperceptions, rumors. Each course shall have at its center the culture, laws and political organization of Southeastern Pennsylvania. Information specific to the Southeastern Pennsylvania Task Force, PA Commonwealth government, the relationship of Counties, Task Forces and State Agencies, Title 35, and other laws of the State shall be included throughout the curriculum as applicable.

Awareness Courses

<i>Introduction to Risk Analysis for Fusion Center Analysts</i>	DHS-001-COMM
--	---------------------

Sponsoring Agency/Agencies: DHS

Course Level: Awareness

Sponsoring Sub-Agency 1: I&A (jointly with DHS/IP/HITRAC)

Sponsoring Sub-Agency 2: SLPO

Delivery Type(s): Mobile/Non-Resident

Duration (in Hours): 3.0

Duration (in Days):

Course Description:

The overall success of the national infrastructure protection mission depends on strong risk analysis capabilities and the development of analytic products that effectively inform decision makers. To accurately analyze risks and prepare high-quality products, analysts require training to implement defensible, repeatable, and complete approaches. The ultimate goal of risk analysis training is to build a community of risk analysts at the Federal, state, and local levels. The Introduction to Risk Analysis for Fusion Center Analysts training course clarifies the concept of risk, builds confidence among the analyst cadre, and implements a repeatable risk analysis process that leverages unique analyst expertise. A follow-on Intermediate Risk Analysis training course is also offered to fusion center analysts, which builds on the foundation established in the Introduction to Risk Analysis training and delves deeper into risk analysis methods and tools for risk analysts. Together, the Introduction to Risk Analysis and Intermediate Risk Analysis courses: - Provide analysts with a documented, reproducible, defensible, and complete process for conducting strong risk analyses; - Highlight the importance of risk analytic tradecraft standards as the fundamental building blocks of strong risk analyses; - Provide risk analysts with detailed guidance on each phase of the risk analysis process, from planning through assessment; - Enhance the consistency and quality of risk analytic products; and - Provide a foundation for specialized training on analyzing risk, developing risk products, and communicating analytic results.

The Commercial Vessel Boarding Training Program (CVBTP) is a one week program that involves extensive hands-on training in the boarding and searching of High Interest Vessels (HIV's). Students will board a 494' break-bulk freighter, conduct interviews, search compartments, and identify void areas and confined spaces. During the Practical Exercise students will conduct an "Underway-High Risk Entry" boarding and search of a 65' vessel in open water. This program was designed for Military, Federal, State and Local Law Enforcement Officers, and Port Authority Personnel who board and search Commercial Vessels.

Duration (in Days):

Course Description:

This program is designed for law enforcement officers and agents who would be involved in security of people and assets, need to prevent a suicide bomber attack, and may actually encounter a suicide bomber. The course consists of lecture, tactical shooting, physical training and intensive practical exercises involving encounters with a suicide bomber. The attendee will learn the motivations behind the suicide bombings and the methodologies of the bombers and how to use security measures to prevent, deter, and detect a suicide bomber. They will be able to physically respond to an attempted suicide bombing, know how to mitigate property damage, and manage the aftermath of a suicide bombings.

The Seaport Security Anti-Terrorism Training Program (SSATP) is a one week program designed to instruct Federal, State, and local law enforcement officers and port authority personnel charged with security responsibilities at our nation's seaports. The combined courses of this program address various requirements of the President's National Strategy for Maritime Security. The Port Facility Inspection course identifies seaport vulnerabilities and discusses the components of a seaport assessment plan. The program incorporates an actual port facility vulnerability survey and crisis management exercise. The SSATP examines the fundamentals of Maritime Domain Awareness as they relate to the prevention of; protection against; and recovery from acts of terrorism at our nation's seaports.

Course Objectives:

Sponsoring Sub-Agency 1: Science & Technology Directorate

Sponsoring Sub-Agency 2: Office of University Programs

Course Level: Awareness**Delivery Type(s):** Mobile/Non-Resident**Duration (in Hours):** 9.0**Duration (in Days):****Course Description:**

Public Safety Crowd Management is designed to provide the knowledge, skills, and abilities (KSA) for first responders and security personnel to manage large gatherings of people congregated inside or outside of a building or critical infrastructure. It was first piloted in the City of Indianapolis in preparation for the National Football League's 2012 Super Bowl. The subject material was well received by the first responder community and documented in a follow-up course assessment in which 96% of the participants highly recommended the course be shared with other professionals in the industry to establish a standard for crowd management as a precondition to crowd control. The curriculum is based on modern theories, current research, and case studies of major incidents that offer valuable insight into crowd behavior and crowd movement in non-emergency and exigency situations. It also includes current knowledge on national and professional standards, recommended practices, guidelines, and lessons learned to establish a consistent standard of care in the safety and security of occupants and critical infrastructures within the national framework of fostering vigilant, prepared, and resilient communities. At the discretion of the local Jurisdiction Having Authority (JHA), successful completion of all training requirements and a post-test written examination will result in student certification as a trained crowd manager in compliance with the standards published in NFPA 101.1, section 12.7.6.1/13.7.6.1. This course supports the goals and objectives of the Office of Domestic Preparedness (ODP) emergency responder guidelines, ODP Homeland Security Guidelines for Prevention and Deterrence, NFPA 1600, 5.9.1-5 National Module for Incident Management (NIMS), Homeland Security Quadrennial Report (QHSR), Recommendations in the 9/11 Commission Act of 2007, Presidential Policy Directive 5 (PPD-5), DHS Stadium Guide 2009, Presidential Policy Directive 8 (PPD-8), and best practices and lessons learned from practitioners in the field with extensive experience in managing large crowd situations.

Sponsoring Sub-Agency 1: I&A

Sponsoring Sub-Agency 2: SLPO

Delivery Type(s): Mobile/Non-Resident**Course Level:** Awareness**Duration (in Hours):** 2.0**Duration (in Days):****Course Description:**

Significant progress has been made by the National Network of Fusion Centers to enhance its ability to execute Critical Operational Capability (COC) 2: Analyze. The incorporation of suspicious activity reporting (SAR) into fusion center analytic processes is a priority focus that will support achievement of the COCs. To accelerate the incorporation of SAR within fusion center analytic processes, the U.S. Department of Justice (DOJ), the U.S. Department of Homeland Security (DHS), and the Nationwide SAR Initiative (NSI) Program Management Office (PMO) are supporting delivery of the SAR Analysis training course. Once analysts are proficient on the ISE-SAR Functional Standard and familiar with the ISE-SAR Shared Space and NSI Federated Search, they can formally analyze SAR to inform fusion center analytic efforts and products. This course will provide instruction on various methods and approaches to analyzing SAR as part of overall fusion center analytic processes. Specifically, the course will instruct participants in the methods for evaluating SAR; conducting structured inquiry focused on SAR trends, relationships, and patterns; and incorporating SAR analysis into fusion center product development. The training is delivered in a 16-hour workshop format.

Course Objectives:

No Objectives Defined.

Course Level: Awareness

Sponsoring Sub-Agency 1: Nationwide SAR Initiative

Sponsoring Sub-Agency 2: Federal Bureau of Investigation

Delivery Type(s): Residential

Duration (in Hours): 8.0

Duration (in Days):

Course Description:

Ensuring that SARs are properly reviewed and vetted is critical to promoting the integrity of information submitted; protecting citizens' privacy, civil rights, and civil liberties; and successfully implementing the SAR process. The SAR Analytic Role Training focuses on the evaluation of SARs to identify behaviors that may be associated with pre-incident terrorism planning and the process for sharing terrorism-related SARs nationwide. Through this curriculum, analysts and investigators are trained to recognize terrorism-related pre-incident indicators and to validate-based on a combination of knowledge, experience, and available information-whether the behavior has a potential nexus to terrorism and meets criteria for submission.

Sponsoring Sub-Agency 1: Defense Threat Reduction Agency

Sponsoring Sub-Agency 2: Defense Nuclear Weapons School

Delivery Type(s): Residential**Duration (in Hours):** 2.0**Duration (in Days):****Course Description:**

The Introduction to Radiological and Nuclear Incident Response (IRNIR) Course is an awareness level course providing instruction on basic radiation science, medical effects of ionizing radiation, and psychological effects of ionizing radiation. Additional instruction on radiation hazards, detection equipment, personal protective equipment, decontamination, and federal incident response is also part of the curriculum. The goal is to increase student awareness in responding to and mitigating the consequences of radiological accidents.

Course Objectives:

At the end of this course, participants will be able to:

- Identify different types of radiation
- Recall radiological and nuclear weapons accidents
- Recall basic scientific principles
- Identify characteristics of radiation detection
- Identify the medical aspects of exposure to ionizing radiation
- Identify protective measures and decontamination

The Technical Support Working Group has released the Improvised Explosive Device (IED) Awareness for First Responders Training Support Package (IEDA TSP) for use by all Federal emergency and law enforcement officers, and all State and Local Fire, Law Enforcement, HAZMAT, Bomb Squad, and other emergency/public government services organizations, which may be involved with terrorist threats involving IEDs. The IED Awareness for First Responders Training Support Package (TSP) is a 190 page, three inch, three ring binder, consisting of an instructor and student manuals, CD-ROM (s) with PowerPoint presentations and manuals, and classroom videos (DVD and VHS). The IED Awareness for First Responders TSP is a complete training package to train state and local Law Enforcement and Security Personnel to an awareness level on the subject of Improvised Explosive Devices (IEDs). The TSP focuses on information pertaining to current IED threats and countermeasures to train emergency responders to recognize IEDs, IED components, potential targets, and methods employed by terrorists using IEDs. The IED Awareness for Emergency Responders TSP will help train emergency responders to understand the threat from Improvised Explosive Devices. The TSP will also help emergency responders identify different types of IEDs and how to respond to IEDs before and after detonation. The IEDA TSP is a restricted document available only to Federal, Allied, State, Local governments, and first responders involved in incident response, security, and counter-terrorism activities. Contractors providing security services and training to these agencies may also procure the TSP. For more information on how to obtain the TSP go to http://www.tswg.gov/tswg/Prods_Pubs/iedatasp.htm

Sponsoring Sub-Agency 1: National Nuclear Security Administration

Course Level: Awareness

Sponsoring Sub-Agency 2: Global Threat Reduction Initiative

Delivery Type(s): Residential

Duration (in Hours): 16.0

Duration (in Days):

Course Description:

The Global Threat Reduction Initiative (GTRI) reduces and protects vulnerable nuclear and radiological material located at civilian sites worldwide. GTRI's Domestic Material Protection (DMP) program works to further increase the protection of radiological sources located at public and commercial facilities in the United States. GTRI support is provided at no cost and includes security assessments, security upgrades, and security training. GTRI provides Thermo RadEyeG model units (and PRD-ER on case-by-case basis) to on-site response personnel for use in protecting themselves and assessing the potential radiation environment during their response to alarm events at locations housing high-risk radioactive materials. The purpose of the Personal Radiation Device (PRD) Train-the-Trainer (TTT) course is to ensure the proper use of the GTRI-provided RadEye G and PRD-ER units, and the proper development of on-site PRD training and maintenance programs. The GTRI PRD TTT is focused on the use of PRDs for personnel protection when responding to incidents potentially involving radioactive materials. This training course does not cover the use of PRDs for interdiction missions. GTRI developed the PRD TTT course specifically for on-site personnel (staff and responders) and local responders who support the protection of sites with radiological materials. The Personal Radiation Device Train-the-Trainer course is conducted at the U.S. National Nuclear Security Administration's Y-12 site in Oak Ridge, Tennessee. The facilities at Y-12 enable participants to conduct hands-on training in a realistic setting utilizing actual radiation source materials. However, the format is flexible and can be used at multiple venues. The course, spanning 2 days, uses classroom lectures and hands on exercises. In addition to the essential objectives, the course can be tailored to specific response force organizations. A certificate will be given upon successful completion of the course.

Course Description:

This module, Protecting Research and Test Reactors (RTR), is added as an option to the Global Threat Reduction Initiative (GTRI) Alarm Response Training Program (ARTP) for those personnel protecting facilities housing research and test reactors. The GTRI reduces and protects vulnerable nuclear and radiological material located at civilian sites worldwide. GTRI's Domestic Material Protection (DMP) program works to further increase the protection of radiological sources located at public and commercial facilities in the United States. GTRI support is provided at no cost and includes security training, security assessments, and security upgrades. The Alarm Response Training Program is a key offering of GTRI's DMP program. One major requirement of an effective security system is a well-trained and equipped response force that can respond to an event in a timely manner. GTRI developed the ARTP specifically for onsite or local responders who support the protection of sites with radiological materials. The Alarm Response Training Program is conducted at the National Nuclear Security Administration (NNSA) Y-12 site in Oak Ridge, Tennessee. The facilities at Y-12 enable participants to conduct hands-on training in a realistic setting utilizing actual protection equipment. However, the format is flexible and can be used at multiple venues. The training, geared towards onsite security, radiation safety staff, and local responders, will prepare responders performing duties at locations known to use or store radioactive materials and provide responders the knowledge to protect themselves and the public during events involving radioactive materials.

Crime Prevention through Environmental Design (CPTED) links system security concepts and initiatives to the system safety program plan early in the transit life cycle. The course emphasizes and enhances industry training by incorporating preventive measures into the facilities design and operations planning, for agencies to be in compliance with the State Safety Oversight regulation. It is critical to plan and design safety and security into all aspects of physical and operational systems. Target Audience: Transit Managers (Executive, Safety, Risk), Safety Supervisors, Engineers, Security Program Planners/Developers/Administrators/Implementers, Auditors, and Corrective Action Personnel

The Pipeline Emergencies program is a comprehensive training curriculum for first responders and pipeline safety personnel. The goal of the program is to help those who will be called to respond to a pipeline accident and save lives, property, and resources. This program was developed by a team of hazardous materials specialists through a cooperative agreement between DOT's Pipeline and Hazardous Materials Safety Administration and the National Association of State Fire Marshals. Together, they brought together well-respected experts in pipeline safety and firefighter training to deliver this best-in-class curriculum. Chapters include: 1) Introduction, Scope and Purpose 2) Pipeline Regulations and Safety Programs 3) Pipeline Operations 4) Liquid Products Pipeline Operations 5) Natural Gas Distribution Pipeline Operations 6) Pipeline Emergency Response Operations 7) Tactical Response Guidelines for Pipeline Emergencies with Scenarios. Material to support this program includes written examinations, instructor materials, Power Points, professionally developed videos, and all material is currently viewable on-line at:

www.pipelineemergencies.com The Course is field deliverable in 4, 8 or 12 hour programs (awareness, operations, incident command and instructor levels can be covered in these time frames). The material does support NTED's mission of preparing for, responding to, and recovering from acts of terrorism and catastrophic events where applicable. It references the following guidelines, regulations, and standards: ODP Emergency Responder Guidelines ODP Strategy for Blended Learning 29 Code of Federal Regulation (CFR)1910.120.q, Emergency Response Program to Hazardous Substance Releases National Fire Protection Association (NFPA) 471, Recommended Practice for Responding to Hazardous Materials Incidents NFPA 472, Professional Competence of Responders to Hazardous Materials Incidents NFPA 473, Standard for Competencies for EMS Personnel Responding to Hazardous Materials Incidents For more information please contact: Philip Oakes National Program Director/Trainer Phone: 202-737-1226 ext 6 (office) info@pipelineemergencies.com

Management Courses

Strengthening Community Agrosecurity Planning (S-CAP)

DHS-033-PREV

Sponsoring Agency/Agencies: DHS

Sponsoring Sub-Agency 1: Office of Health Affairs

Sponsoring Sub-Agency 2: FAVD

Delivery Type(s): Mobile/Non-Resident

Course Level: Management

Duration (in Hours): 10.0

Duration (in Days):

Course Description:

The two-day Strengthening Community Agrosecurity Planning (S-CAP) workshop enables community partners to build capacity to handle agricultural issues during an emergency or disaster; improve networking among stakeholders who can plan for and respond to emergencies; and develop community agrosecurity planning teams to establish or enhance agrosecurity components within existing local emergency operations plans. Workshop participants include a wide range of community members that come together to address the issues relevant to their specific agricultural vulnerabilities. The workshops help guide local Extension personnel and other community partners in developing and/or enhancing the agricultural component of their local emergency operations plan (EOP) to help safeguard the community's agriculture, food, natural resources, and pets. The workshops empower communities to build on their capacity to handle agricultural incidents through improved networking and team building. The S-CAP workshops implement a 'whole community' approach to agriculture emergency and disaster planning. Critical local agricultural infrastructure systems are identified and prioritized. Fifteen activities throughout the workshop enable participants to begin construction of or further develop agricultural components.

Duration (in Hours): 8.0

Duration (in Days): 1.0

Course Description:

The Local Emergency and Disaster Planning for Small Animals is a tabletop exercise (TTX) designed to assess a jurisdiction's planning capabilities to address animal response during an emergency or disaster. This TTX is a facilitated scenario that addresses local disaster and emergency planning needs for animals. Each scenario-driven module begins with background information. After the scenario updates are provided, participants review the situation and engage in functional group discussions about appropriate response issues. For this TTX, the functional groups are defined as multi-disciplinary jurisdictional teams comprised of individuals responsible for writing, reviewing, and updating the animal issues components of their local emergency operations plan (EOP). In this exercise these teams are called community agrosecurity planning (CAP) teams. The exercise implements a whole community approach to agricultural emergency and disaster planning.

Course Objectives:

At the end of this course, participants will be able to:

- Identify and understand their team role
- Introduce their emergency operations plan (EOP)
- Collaborate with jurisdictional partners to assess common planning goals
- Review compliance requirements for the Pets Evacuation and Transportation Standards (PETS) Act of 2006 and Americans with Disabilities Act
- Summarize the local emergency operations plan (EOP)
- Discuss a small animal rescue scenario
- Assess the EOP's adequacy to address providing logistics, deployment of resources, transportation to shelter locations and shelter in place for small animals during a disaster by completing a gap analysis
- Review compliance requirements for Americans with Disabilities Act (ADA)
- Discuss a large animal rescue scenario
- Assess the EOP's adequacy to address providing logistics, deployment of resources, transportation to shelter locations and shelter in place for large animals during a disaster by completing a gap analysis
- Discuss a large animal sheltering scenario
- Complete a disaster sheltering calculation worksheet
- Discuss surge capacity
- Assess the EOP's adequacy to address the establishment, support and sustainment of large animal emergency/disaster sheltering operations and other temporary housing options
- Complete an exercise feedback form
- Participate in a hot wash
- Begin development of an After Action Report/Improvement Plan

Duration (in Days):

Course Description:

The BOAT OPERATOR for SEARCH AND RESCUE Course of instruction is designed to give maritime law enforcement and emergency responders a learning framework in order to become proficient with skills necessary to operate in the maritime environment and conduct search and rescue operations. A key element of this course will be the preparation of participants to become qualified in the tasks necessary for response to maritime safety and security operations. The five day/35 hour course will focus on the elements as listed in the U.S. Coast Guard's Boat Operations and Training Manual and meet the national standards of training, qualification, credentialing and typing established in the NASBLA Boat Operations and Training (BOAT) Manual (Volume III).

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Course Level: Performance

Duration (in Hours): 24.0

Duration (in Days):

Course Description:

The PURSUIT AND STOP Course provides a course of instruction to give maritime law enforcement officers the knowledge and skills necessary to perform pursuits of Non-Compliant Vessels in a safe, efficient and effective manner, and in accordance with Coast Guard, Customs and Border Protection and Department of Homeland Security standards and policies. A key element of this course will be the preparation of participants to become qualified in the tasks necessary for response to maritime safety and security operations. The three day/24 hour course will focus on the skills and knowledge necessary to operate a law enforcement vessel at high speeds in day or night and in various sea conditions, in order to pursue, stop, and board a non-compliant vessels on the shorelines and waterways of the United States. The training will be conducted in accordance with the U.S. Coast Guard's Boat Operations and Training Manual.

Duration (in Days):

Course Description:

This course provides an environment for First Responders to perform tactical operations in a scenario-driven exercise under realistic incident conditions involving a post-blast IED incident on a mass transit or passenger rail system. Scenarios are based on the most current threat assessment available for mass transit and passenger rail systems. Training addresses the technical aspects of planning and implementing an Incident Command System to provide command and control over a post-IED incident utilizing classroom presentations, hands-on performance based training, and a full-scale exercise in a realistic environment located at the Center for National Response (CNR) Memorial Tunnel Complex, Gallagher, West Virginia. The Transportation Security Administration, West Virginia National Guard, JITEC, and West Virginia University are collaborative partners in this training.

Registration Point of Contact: Ms. Natasha Kelly Public Relations Representative and Training Coordinator Homeland Security Programs 886 Chestnut Ridge Road, Room 309 P.O. Box 6270 Morgantown, WV 26506 Phone: (304) 293-4233 Fax: (304) 293-7199 E-mail: natasha.kelly@mail.wvu.edu

Course Description:

This course provides a venue for First Responders to perform tactical operations in a scenario-driven exercise under realistic incident conditions involving emergency medical response to a WMD incident on a mass transit and passenger rail systems. This course is designed to provide the participants with the medical skill set needed to provide initial casualty care in a post-WMD incident environment. Content in the course is based on guidelines from the Department of Defense Committee on Tactical Combat Casualty Care and the civilian Committee for Tactical Emergency Casualty Care. Participants will receive an overview of mass transit and passenger rail systems, instruction on the history of tactical emergency care, current emergency casualty care guidelines for high-threat environments, field triage, the use of tourniquets, casualty extraction techniques, basic airway management techniques, and methods of hemorrhage control. Hands-on training will be provided at medical skills stations. Casualty scenarios will require the student to evaluate and provide initial care to mass transit and passenger rail casualties inside direct and indirect threat situations. This course is designed to allow the First Responders to function in situations typically denied of Emergency Medical Services entry. The course includes classroom presentations, skill performance stations, a situational training exercise, and a large scale casualty scenario exercise in a realistic venue located at the Center for National Response (CNR) Memorial Tunnel Complex, Gallagher, West Virginia. The Transportation Security Administration, West Virginia National Guard, JITEC, and West Virginia University are collaborative partners in this training.

ADT I is an unclassified five-day course of instruction that focuses on WMD threat awareness, interagency policy, national response architecture, nuclear science, radiation detector theory, and crisis communications.

Course Objectives:

At the end of this course, participants will be able to:

- Categorize the purpose of the interagency Advanced Diagnostics Training (ADT) program
- Categorize responsibilities of counter weapons of mass destruction response equities in accordance with the National Response Framework (NRF)
- Compile the Federal Bureau of Investigation's (FBI) role during each technical phase of a weapon of mass destruction incident
- Categorize the National Nuclear Security Administration's (NNSA) responsibilities during a WMD response
- Categorize basic concepts of physics and physical science that apply to Threat Awareness
- Structure basic concepts of radioactivity decay that apply to Threat Awareness
- Structure radiation interactions with matter that apply to Threat Awareness
- Perform basic calculations that apply to Advanced Diagnostics Training
- Categorize the biological effects of ionizing radiation
- Compile applicable occupational and emergency radiation exposure guidance
- Categorize basic concepts of radiation detection theory
- Incorporate concepts of gamma spectroscopy in order to maximize the spectrum collection capabilities
- Categorize radiological and nuclear materials of concern
- Organize principles of nuclear explosions in order to have an awareness level knowledge of nuclear threats
- Organize communications standards for spectrum data submission to the Triage program

- Structure the interagency Point Search techniques used to maintain Threat Awareness of radiological and nuclear materials

Other Prerequisites:

1. Title 10, 18 and 32 Technical Responders assigned as Explosive Ordnance Disposal, Bomb Technicians and/or members assigned to Special Operations Command whose steady-state operations require an awareness of Nuclear Materials of Concern (NMOC).

Primary Core Capability:

Threats and Hazard Identification

Secondary Core Capability(s):

- Planning
- Screening, Search, and Detection
- Situational Assessment

Mission Area(s):

- Protect
- Respond
- Mitigation

Discipline(s):

- Hazardous Material
- Security and Safety

Delivery Type(s): Residential

Course Level: Performance

Duration (in Hours): 24.0

Duration (in Days):

Course Description:

The Global Threat Reduction Initiative (GTRI) reduces and protects vulnerable nuclear and radiological material located at civilian sites worldwide. GTRI's Domestic Material Protection (DMP) program works to further increase the protection of radiological sources located at public and commercial facilities in the United States. GTRI support is provided at no cost and includes security assessments, security upgrades, and security training. The Alarm Response Training (ART) is a key offering of GTRI's DMP program. One major requirement of an effective security system is a well-trained and equipped response force that can respond to an event in a timely manner. GTRI developed the ART specifically for on-site personnel (staff and responders) and local responders who support the protection of sites with radiological materials. The Alarm Response Training Program is conducted at the U.S. National Nuclear Security Administration's Y-12 site in Oak Ridge, Tennessee. The facilities at Y-12 enable participants to conduct hands-on training in a realistic setting utilizing actual radiation source materials and protection equipment. However, the format is flexible and can be used at multiple venues. The training prepares and provides on-site personnel and local responders the knowledge to protect themselves and the public during events involving radioactive materials. The course, spanning 3 days, moves from classroom lectures, to a table top exercise, and finally to realistic operationally-based field exercise scenarios. In addition to the essential objectives, the course can be tailored to specific response force organizations. A certificate will be given upon successful completion of the course.

Analysis 101

DHS-007-PREV

Sponsoring Agency/Agencies: DHS

Sponsoring Sub-Agency 1: ODNI

Sponsoring Sub-Agency 2: Analysis

Delivery Type(s): Mobile/Non-Resident

Course Level: N/A

Duration (in Hours): 2.0

Duration (in Days):

Course Description:

Analysis 101 is an entry level course that prepared new analysts to play their role in achieving the DNI's goals of transforming intelligence analysis and fully integrating the intelligence community. It brings together new analysts from throughout the IC during their initial months on the job for 18 days of rigorous training in a truly joint environment, equipping them with the analytic skills necessary to achieve the IC's published Analytic Standards. It does so by concentrating on how critical thinking fosters best practices in analytic tradecraft. Students examine the inter-related stages of the analytic process, discuss the many barriers and pitfalls (personal, organizational, technical, and environmental) that can impede it, and practice techniques that help overcome obstacles and improve analytic rigor. A core component is instructional and guided practice in thinking critically about the reasoning process. Working closely with peers from other agencies, new analysts acquire a common set of analytic skills and a joint perspective on intelligence enterprise, a solid foundation on which subsequent agency-specific training can build.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

Law Enforcement-Intelligence Analysts Members of the Intelligence Community who have less than six months in an Analytic position, i.e., General Series 0123. Applicant must also possess and have been granted a final clearance, i.e., SI/TK. Also, only those seats that are in excess will be available to non-federal civilian law enforcement personnel in analytic positions. Registration deadlines are usually 10 days before classes convene.

Mission Area(s):

- Prevent

Discipline(s):

The BOAT program is a one week course designed to instruct the experienced marine law enforcement officer in the advanced skills required to operate vessels in anti-terrorism/port security operations. The courses of this program address various requirements of the Presidents National Strategy for Maritime Security. The course Strategic Maritime Threat, examines the fundamentals of Maritime Domain Awareness as well as terrorist tactics, techniques and entry points. There is also a review of how many of the aspects of criminal and terrorist activities are synonymous and that terrorists are now exploiting traditional criminal activities to support their missions. The Boat Tactics Static Security Zone and Boat Tactics Moving Security Zone courses cover; accepted terminology, zone responsibilities, patrolling techniques, clearing field of fire, pre-arrival requirements i.e. (pier inspections and escort route inspections), and defensive boat tactics i.e. (intercept, screening, herding and shouldering) that are consistent with the Department of Homeland Security standards and U.S. Coast Guard policy and procedures. The Maritime Law course addresses jurisdictional and authority issues related to the enforcement of security zones. The Patriot Act is also discussed in reference to the sections dealing with Mass Transportation, Maritime Navigation, Maritime Fixed Platforms and Material Support to Terrorist. The Tactical Electronics course instructs the student in the application of various pieces electronic equipment for surveillance purpose and to identify position in relation to security zone boundaries. This is especially important as it relates to Use of Force issues.

CIKR Asset Protection Technical Assistance Program (CAPTAP) assists State and local law enforcement, first responders, emergency management, and other homeland security officials how to use C/ACAMS as the platform to support the development and implementation of an infrastructure asset protection program. CAPTAP is a weeklong course that includes understanding processes, methodologies, and resources necessary to identify, assess, prioritize, and protect infrastructure assets. An overview of the development, implementation, and operation of a CIKR protection program, leveraging lessons learned and best practices from State and local CIKR protection programs, including:

- o Understanding the CIKR protection environment;
- o Understanding State and local roles and responsibilities associated with the NIPP risk management framework;
- o Engaging in and fostering public/private partnerships;
- o Developing a multidisciplinary and multi-jurisdictional CIKR protection program;
- o Defining, identifying, and cataloging CIKR sites and systems;
- o Conducting CIKR assessments;
- o Cataloging CIKR asset information using recognized naming and cataloging conventions;
- o Integrating mapping and geospatial information services (GIS);
- o Understanding, implementing, and using Protected Critical Infrastructure Information (PCII) protection measures;
- o Implementing preventive and protective actions at and around CIKR sites;
- o Conducting pre-incident security enhancement planning;
- o Conducting site assessment out-briefs;
- o Developing, implementing, and communicating target-hardening options; and
- o Integrating CIKR protective programs with fusion centers and/or emergency operation centers.

An on-site assessment walk-through at a CIKR site, including:

- o Effectively coordinating and communicating with CIKR asset owner/operators and on-site security and facilities personnel;
- o Applying the assessment methodology; and
- o Conducting CIKR owner/operator out-briefs.

This training will apply to law enforcement agencies operating in and around waterways, whose role is to protect the public, the environment, and U.S. security interests in any maritime region vulnerable to radiological/nuclear terrorism, including inland waterways, harbors, marinas, and ports. Maritime training is designed to train law enforcement and public safety officers to employ department-issued radiation detectors, within the bounds of the jurisdiction/agency operational environment, procedures, and legal considerations. The module should prepare state and local law enforcement agencies to detect and report terrorist attempts to import or transport radiological or nuclear material via navigable waterways. Hands-on practical exercises will reinforce classroom training, and will be conducted in a maritime environment. RAILS is a platform that houses multiple radiological prevention training courses. In RAILS, the course is a learning path. Each course consists of a series of training modules (the training games that take place in the 3D virtual world) which students must complete in order (successful completion of one module unlocks the next). Learning paths can be tailored or even created from scratch by qualified instructors and administrators, but presently RAILS comes with 4 default learning paths. The following describes one particular learning path which is the path that is documented in the attached. This is a portable digital course suitable for refreshing training and/or guided initial training; the target audience is law enforcement and first responders. This course will instruct, illustrate and review the concepts and circumstances regarding RND Secondary Screening Training. The objectives to cover are: basic material attenuation concepts and practice, basic identiFINDER RIID operation, Primary and Secondary Screening interaction, and basic Reachback procedures and practice. Delivery Type(s): Residential**Course Level:** N/A**Duration (in Hours):** 1.0**Duration (in Days):****Course Description:**

This Instructor Led Training (ILT) provides a foundation for understanding the behavior of radiation and sets the stage for discussions regarding personnel safety and instrument detection capabilities. Working with radioactive material is not something everyone does. Issues of personal safety need to be understood, because they are a massive concern. In order to begin feeling competent when working around radioactive materials and implementing the RND mission, a basic understanding of what radiation is and how it behaves is necessary. For more information please contact: Kay Farrow-Smith DNDO Office of Operations Support Directorate Training and Exercise Phone: 202.254.7101 Email: dndotraining@hq.dhs.gov

Course Level: N/A**Delivery Type(s):** Residential**Duration (in Hours):** 2.0**Duration (in Days):****Course Description:**

A comprehensive professional development (training) program aimed at providing a professional certification for criminal intelligence analysts. The program helps fill the gap between the legacy image of crime analysts as simple researchers in support of criminal investigations, and the current and future need for a professionalized team of skilled analysts, enabling law enforcement agencies to implement intelligence-led policing strategies. This program, the Intelligence Analyst Professional Development Program (IAPDP) consists of more than twenty weeks of course material broken into five job-structure levels, with up to nine class subjects in each level. It is designed to provide a continuing-education environment from entry level through ten plus-year career mastery. The five courses included in the program are Crime Analyst, I & II, and Criminal Intelligence Analyst I, II, and III. Each course builds on the prior course content, and is tailored to the knowledge, skills and abilities (KSAs) needed at that level. Basic courses focus on the basic skills such as critical thinking, writing, and briefing, as well as cover introductory information newly hired employees may not be aware of, such as the structure of the US Intelligence Community and the Texas Criminal Justice System. Each of the five courses comprises up to nine separate classes. These nine classes carry through each of the five courses as appropriate. Classes build up on each other with common themes and exercises where possible to create a holistic approach to learning. Classes: Texas Criminal Justice Systems; Overview of Intelligence Analysis; Intelligence Fusion Process; Critical Thinking and Analytic Methods; Research Methodology; Statistics; Principals of Intelligence Writing and Briefing; Open Source Intelligence; Vulnerabilities, Threats, and Risk Assessments.

The new Neighborhood Watch Toolkit enhances Neighborhood Watch activities by providing formal training for law enforcement, Block Captains, and community volunteers. The Toolkit provides information and training on a wide variety of public and community safety-based topics, including volunteer management, partnerships and conducting effective meetings. In addition there specialized presentations for Area Coordinators and Block Captains and informative community-based presentations that are supplemented by numerous action-oriented Neighborhood Watch tools. The tools, templates and forms can be easily replicated or tailored to meet the individual needs of a local Neighborhood Watch organization.

Delivery Type(s): Mobile/Non-Resident**Course Level:** N/A**Duration (in Hours):** 4.0**Duration (in Days):****Course Description:**

Participants will receive the necessary information on how to develop a System Security Program Plan (SSPP) and how to implement the program. They will be shown how to use resources to reduce crime and improve passenger and employee security. The course provides a uniform format for developing and implementing security policies and procedures through a SSPP with crime prevention as the major component. Included are basic security terms, the eight steps in threat and vulnerability identification, and resolution process. The course addresses security in system planning, design, and construction; agency policies and procedures; managing special security issues; and various types of transit security staffing. Incident command system and coordination of response efforts and resources (NIMS/NRP) are also included.

Duration (in Hours): 28.0

Duration (in Days):

Course Description:

This course provides information on understanding the importance, purpose, development, and implementation of emergency management and how it relates to the other safety functions of a transit system. Participants will learn how to better understand the emergency management concept and the role of the transit system in responding to emergency/disaster situations in both the community and transit system. The course provides information which can be used to introduce emergency management into the acquisition and operational phases of a transit system life cycle and thereby implement or improve emergency management programs. Participants will be prepared to understand the elements of an effective emergency management program and how interaction of these elements affects the management of the emergency situation, as well as the roles and responsibilities of community officials, transit system personnel, and fire, police, EMS, etc., including the key issue of the importance of dealing with the media quickly, accurately, and professionally.

Course Description:

The curriculum for the Intermodal Emergency Response Specialist ¿ Advanced (HERS-A) course is designed to provide participants with advanced knowledge and practical skills needed to respond to a complex Intermodal incident involving HazMat/WMD. Participants will learn to respond properly to emergency incidents involving various modes of Intermodal transportation, including cargo tanks and intermodal (IM) containers. Participants will gain advanced knowledge in the design and construction of these Intermodal containers and also in intermediate bulk containers, cylinders, and other non-bulk packages used to transport HazMat/WMD. Participants will receive highly technical knowledge and will participate in incident analyses of the HazMat/WMD release, damage assessments of Intermodal containers, and movement and/or up-righting of damaged cargo tanks. Participants will also perform container drilling, transfers and flaring of HazMat/WMD, and including advanced activities to mitigate releases of HazMat/WMD from the various containers used in Intermodal transportation. After receiving the curriculum and participating in the scenario-based incidents, successful participants will be capable of overseeing and performing advanced Intermodal specialist activities in an emergency response to an Intermodal incident involving HazMat/WMD.

Course Objectives:

No Objectives Defined.

Other Prerequisites:

NIMS 100, 200 and 700 are prerequisites to attend the course and the following are recommended prerequisites: Successful completion of a HazMat/WMD Technician level course and a Intermodal Emergency Response Specialist course based on Federal Regulations (CFR), Title 29, 1910.120(q) OSHA regulations, and the National Fire Protection Association¿s (NFPA) Standard 472.
